INTRODUCTION:

What Side of History Are You On?

By Leandra Bernstein

There are only so few moments in history when there is the potential for a revolutionary shift in world affairs in one direction or another, a drastic departure from the policy that preceded that which follows. On July 26, 2008, Lyndon LaRouche announced the countdown to the terminal end of the present world financial system. He said that although it is not yet determined that the United States will commit to perpetuating that deadly folly, it is what is in process now. LaRouche concluded, "There is no room to debate what the situation is...In one month, the world will look completely different than today." That deadline inevitably coincides with the most historically critical Presidential nominating convention; more critical than 1932 when the United States was led from the seat of Hell by the Democratic choice of Franklin Delano Roosevelt for President.

For two decades now, Al Gore has been drooling to take the U.S. Presidency. He seeks the office in part because of his very fat-headed ego—a problem which seems to have stricken some other candidates recently—but, more so, to play a role that will benefit the historic enemy of the United States. From his early days as a Tennessee racist, to his Wellsian commitment to prevent nations' broad use of technology, to his favored status among the British Royal family, Gore has been a crucial asset in realizing Prince Philip's intention to reduce the world's population by 80% through famine, disease, and war. In his capacity, Gore has been the "missing link," not just from possum to man, but far worse: from the British Empire to the United States.

At each critical turning point in modern history, Gore has been caught on the wrong side. Beginning in the late 1950's and throughout the 1960's, Lyndon LaRouche issued numerous public warnings that a series of major monetary disturbances would lead to the collapse of the Bretton Woods system, unleashing something far worse than a new Depression, which would include fascist looting and austerity measures. In those years leading into August 15, 1971, when Richard Nixon ended the Bretton Woods system, LaRouche was proven to be both correct, and the only competent economist of his time. A new policy direction, ushered in by the pot-headed, literally fascist youth of 1968—who gave us Richard Nixon—also opened the gates to the deadly outbreak of post-

industrialism, environmentalism, and neo-Malthusian population control. Through such characters of the time as the brain-dead, acid-washed Futurist, Alvin Toffler, Gore made his breakthrough into the U.S. Congress where he teamed up with Newt Gingrich and other agents to implement "zero-growth" Malthusian policies domestically and abroad, which, in our present experience we recognize as outsourcing, and the threatened outbreak of globalized famine.

From the period from 1988-1992, certain crucial political decisions—both taken and not taken—had

Whether man, possum, neither, or both, Al Gore, in the tradition of traitor Aaron Burr, is attempting, now, to run for the Democratic Presidential nomination as soon as Barack Obama might be dumped.

brought the world again to a critical moment, ripe for change. Gore made his pathetic entry onto the scene with his first failed bid for president in 1988, after which he skulked into the bosom of the British Royal Family to nurture his passion for population reduction and warfare against national sovereignty (environmentalism). After his close collaboration with the World Wildlife Fund's Prince Philip, the man who wishes to be reincarnated as a deadly virus, Gore re-emerged with the compliment to Philip's book *Down to Earth*, the 1992 genocidal tract, *Earth In The Balance*, or euphemistically, "Mein Planet."

This is what followed President Bill Clinton into the White House. This was the usher for NAFTA, the real hand slashing the poor through "welfare reform." This was the White House mole used to launch Operation Desert Fox, and the NATO bombing of Yugoslavia. But most importantly, at the time when the world financial system was overripe for complete collapse, after the GKO bond-crisis, the Asian market crisis, and the LTCM blowout, Bill Clinton was prepared to launch a "new global financial architecture" echoing Lyndon LaRouche's New Bretton Woods concept. At that moment, Gore's old friend, House Speaker Newt Gingrich, brought articles of impeachment against the president. Gore, in order to stop the President from adopting LaRouche's policies and to protect British financial interests, begged him to "just resign." "Resign"—otherwise Gore wouldn't stand a chance in the 2000 elections, where even after stealing delegates from presidential candidate, Lyndon LaRouche, he proceeded to lose the election to the dumbest man to ever run for that office.

Far from disappearing after that election, Gore made a breakthrough into the London off-shore looting scheme known as hedge funds, which have been largely responsible for the takeover and takedown of what remains of the U.S. productive economy. His Generation Management hedge fund which specializes in trading carbon swaps, is a swindle to loot a dying economy, and was complimented by the 2006 Hollywood fiction, *An Inconvenient Truth*. That fraudulent set of alleged facts was unleashed in force against the Congress and the public in 2007 at the very moment when the mortgage related terminal collapse of the U.S. and world banking system had begun. After being awarded for the climate fiction by Hollywood and the Nobel Prize Committee, Gore was again welcomed into the open arms of the British and hired by then-Treasury Chief Gordon Brown, to advise the British government on climate change.

Finally, on July 22, after setting forth a frankly genocidal vision of the United States shifting to 100% renewable energy in the next ten years, Gore announced that his role is to "enlarge the political space within which this issue can be addressed," to encourage the next president to take up population control, and "zero-growth" policies. Again, in a moment of historic change, Gore is being led, like one of the Royal Family's four-legged beasts, towards the presidency. Of course he is a fool, and it is, in fact, very likely that he is a marsupial; but Gore, like former Vice President Aaron Burr, a vicious traitor, is attempting, now, to run for the U.S. Presidential nomination as soon as Barack Obama might be dumped—if they are capable of doing so.

SLIME MOLD ON THE 'BACK STAIRS':

The Swamp Whence Al Gore Came

By Dennis Mason

"What Al Gore represents, in particular, is a picaresque reflection of the essence of the oligarchical model traced in our national history from traitors such as Lord Shelburne-backed crony of the British Foreign Office's Jeremy Bentham, the traitor Aaron Burr who founded the Bank of Manhattan. This connection to Gore has been shown most clearly by that almost swamp-creature-like, self-disgraced Tennessean's "mint-julip" racist, and "environmentalist" (i.e., eugenics) orientation, in alliance with Britain's Fabian imperial Prime Minister Tony Blair, against the black-skinned population and nations of sub-Saharan Africa.

However, it is to be emphasized that, in Gore's case, the silliness comes less from the hooch, than the "branch water." Shades of the 1970s collusion among the clippings-service mentalities represented then by the fellow-Confederates Gore, neo-Jacobin Newt Gingrich, and the pathetic Tofflers! It might be said, that one could get Al Gore out of the swamp, but it would be much more difficult to get the swamp out of Al Gore.

If I seem to view Gore as so much rubbish, take note of the fact that everything I say on that account is true, but,

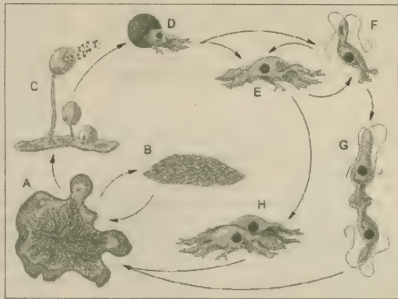

also, that I am obliged to do so to put the emphasis truthfully where it belongs. Gore is essentially an intrinsically expendable, mere errand-boy, not the master. Expose Gore for the miserable creature which he is, but save your fire for the global financier circles which are the architects of the immediate fascist danger to the planet now, as financier interests of the same breed, such as Felix Rohatyn, which, like Hitler's British sponsor, the Bank of England's Montagu Norman, and the Bank for International Settlements' Hjalmar Schacht, led, among numerous other Anglo-American, Dutch, French, and other financier circles, in creating the Hitler regime. So, the hedge funds, an operation centered in the British Cayman Islands, were created today. We must take Gore fully into account for what he represents; but, we must not let him be treated as a scapegoat for the truly evil masters which he, like programmed and scripted wind-up toy Gov. Arnold Schwarzenegger, merely serves. This time, the financier circles like those which created Hitler must not escape the accounting for their crimes."

—Lyndon H. LaRouche, Jr.¹

To investigate the brackish roots of Albert Gore, Jr., requires going back no later than the end of the U.S. Civil War. It was Lincoln's success in defeating Palmerston's Britain, which set in motion the events which would come to shape the life of Albert Gore. It was the attack on the optimism spread in the wake of the 1876 Centennial Celebration, the successful completion of the Trans-Continental Railway, and the unfettered spread of the American System of political economy throughout the world, an attack which continues to this day; this is the driving factor, without which hollow Albert Gore, and others in his image, would collapse in on themselves like so much nothing, to be blown away like the sand at the feet of famed Ozymandius.

The thread of this present investigation rests upon the social heritage of the Gore family, as bequeathed by the Hammer family. As the Gores were merely lapdogs of the Hammers, so, too, were the Hammers to the Bolsheviks. And one of the key British operatives of the Bolshevik Revolution was one Alexander Helphand Parvus.² As Parvus's biographers summarized Parvus's outlook on the eve of the 1917 Russian Revolution:

Helphand showed that he believed that any political aim could be realized with sufficient money, that the elite of the socialist leaders could resist the lure of mammon no more than any other social group, that friendship, as much as political support, had to be bought. Such a view informed his political strate-

The slime mold, a one-celled plasmodium with many, many nuclei, produces distinct reproductive structures housing spores which, as different elements of the British Empire do, can remain dormant for more than 75 years, and then germinate.

gy; it was the essence of his political and human experience.³

Such a view would clearly inform the Hammer family, as well.

And, as the Gores were the errand-boys for the Hammers, the question which follows is, whose interests were the Hammers' errands serving? Here is where we run into the slime mold in fact, the supranational banking apparatus which brought us, via the British Empire, two world wars, the current spot-market driven hyperinflationary U.S. dollar system, and, among other nasty elements, George Soros.

1. Lyndon H. LaRouche, Jr.; "The Cult of the Oligarchy: The Gore of Babylon," *EIR*, March 30, 2007.

2. Jeffrey Steinberg, Allen Douglas, and Rachel Douglas, "Cheney Revives Parvus 'Permanent War' Madness," *EIR*, Sept. 23, 2005.

3. Z. Zeman and W.B. Sharlau, *Merchant of Revolution* (London: W. & J. Mackay & Co., Ltd, 1965).

The establishment of the U.S. at a relatively safe distance from the European oligarchy created the conditions which fostered the greatest density of scientific innovation in mankind's history. It is not simply train systems as such that threaten the British Empire, but the upshift in cultural productivity that blossoms in the notions which participate in the production, use, and propagation of these, and other scientific and technological achievements. Here, a U.S.-built Baldwin locomotive, 1872.

1. The Anglo-Dutch-Liberal Soviet Union

To begin to get a sense of the character of the Hammers' masters, requires looking into the real sponsors of the Bolshevik Revolution, in many cases, the same sponsors who brought us Hitler. The idea behind the following overview is not so much the specifics, but to give an overview of the banking apparatus that was in play, at that time, to accomplish the goal of world fascism. You may notice the similarity in method, effect, and disposition to the financial-political apparatus of which George Soros is the current foreman. This is because they are different spore structures of the same slime mold.

To understand the social and political dispositions of the Gore family, we'll look at three aspects of the history which shaped them. First, a look at the international financial circles which were used by the British in defense of their sea-lanes, will give us the context in which the Hammer family's activities were situated, and the general mode of operations of this imperial slime mold.⁴ Next, we turn to the Hammer family's activities as such, as a more localized expression of this process of empire, or if you will, as the footmen, of sorts, on behalf of an imperial destabilization operation. Finally, we see the manner in which the torch was passed from the Hammers to the Gores. This illustration serves to shed some light on the peddlers of what President Franklin D. Roosevelt would term "Eighteenth-Century methods," in his fights

with Winston Churchill over post-war policy, methods which continue to this day in the rotund form of Albert Gore, Jr.⁵

Witte's American Optimism

The welfare of Your Empire is based on national labor. The increase of its productivity and the discovery of new fields for Russian enterprise will always serve as the most reliable way for making the entire nation more prosperous. We have to develop mass-production industries, widely dispersed and varied. We must give the country such industrial perfection as has been reached by the United States of America, which firmly bases its prosperity on two pillars—agriculture and industry.

—Russian Minister of Finance Sergei Witte to Tsar Nicholas II, 1899 memo

The Bolshevik Revolution, and World War I more broadly, was a direct attack on, among other things, the optimism embedded in Witte's referenced correspondence. This took the form of a response by a slime mold of bankers who, in some cases, have, reportedly, directly traceable lineage to 17th-Century Venice, the former seat of the power, such as it is, that the United Kingdom wields to the present moment. Place on the stage of your imagination, as subtext, the 1881 assassination of Alexander II, an Alexander who lent crucial naval support to Lincoln during the Civil War. Look at the installation of Ser-

gei Witte as Finance Minister in 1892, a Witte whose active hand was shaping what would become the Trans-Siberian Railway; view this against the backdrop of the establishment of the British Round Table group in the 1880-90s.

Cecil Rhodes, one of the Round Table's founders, was a hard-core racist and murderer.⁶ Philip Kerr, who would lead the Round Table from 1925 to 1940, moved from "Germanophobia" to pro-Nazism. He would come to endorse Hitler's taking of Czechoslovakia: Since it was, in his words, "almost the only racially heterogeneous State left in Europe," it had no right to exist. Lord Alfred Milner, the previous head of the group, delivered a series of six lectures on socialism before his death in 1925, and considered Sidney and Beatrice Webb's "A Constitution for the Socialist Commonwealth of Great Britain" as a "very well-informed and thoughtful" approach to a "New Order."

Alfred Milner would become the business partner of one Max Warburg, of M.M. Warburg pedigree, a banking house and family that was very prominent in the anti-American-System Bolshevik operation. This family, dating back to Venice's 17th-Century financier Anselmo del Banco,⁷ would go on, during the post-war period, to defeat some of the Establishment houses of the City of London, a battle waged by Sir Sigmund Warburg. Witte had noted that Japan, with her limited personnel and financial resources, could not have sustained the Russo-Japanese War without political backing from Britain and without a general financial underwriting; it was Max Warburg who, in 1904, secured monies for Japan through German Undersecretary of State Arthur Zimmerman, with the help of Franz Urbig, director of Disconto-Gesellschaft. Disconto-Gesellschaft was one of the founders of the Venetian Count Volpi de Misurata's Banca Commerciale Italiano, and would later conduit funding into the Bolshevik movement. Max, a hard-core Bolshevik patron, joined with Sir Ernst Cassell, privy counselor and personal banker of Britain's King Edward VII, to form the Edward VII Foundation.

Another hard-working Warburg brother was Paul,

and his mission was to impose British monetarism on the United States, in enmity to the system of credit, and thus economic development, embedded in the U.S. Constitution. After the assassination of President William McKinley in 1901, Theodore Roosevelt, a member of an Eastern Establishment family, was

Hitler and his banker Hjalmar Schacht, who organized the financing to put the Nazis in power. Today's Anglo-Dutch financial circles, and their American collaborators, are orchestrating fascism again, using the likes of Al Gore.

thrust upon the U.S.A. This Roosevelt has been quoted as saying, "Why not give Warburg the job? He would be the financial boss, and I would be political boss, and we could run the country together"—a statement uttered in the context of an international operation of securing the central banking system, as a system, globally. "The job," would come later under President Woodrow Wilson, who, in 1914, appointed Paul a member of the Federal Reserve Board, at the Equitable Life Assurance building at 120 Broadway

in New York City. Paul helped pen the law creating the Federal Reserve system in 1913.

120 Broadway

120 Broadway would become a staging ground in the United States for many of the Synarchist financial operations leading into both world wars, which, from a geopolitical standpoint, were one and the same operation.⁸ One tenant, John MacGregor Gant, was the U.S. subsidiary of the Russo-Asiatic Bank. Russo-Asiatic had been founded with elements of the French banking structure (e.g., Paribas), to drive a wedge between the Prussians and the Russians.⁹ The Russian chair of the Russo-Asiatic bank from 1910-17 was A.I. Putilov, whose Putilov Works was instrumental in causing ferment leading into "Bloody Sunday" of 1905 Russia, the first insurrection against the State that would eventually lead to the consolidation of power under the Bolsheviks. Alexander Helphand Parvus would go on to use Russia-Asiatic as a money conduit for the Bolsheviks. Another tenant at 120 was Guggenheim Exploration, whose promoter, William Boyce Thompson, personally delivered \$1 million to the Bolsheviks, while leading the Red Cross mission to Russia.

Equitable Life Assurance, the namesake of the building at 120 Broadway, had on its payroll one William Schacht, a 30-year employee whose son was Hjalmar Horace Greeley Schacht. In 1918, Hjalmar worked on the board of the German National Bank, co-directing it with Emil Wittenburg. Wittenburg would go on to direct the first Soviet foreign trading bank, Ruskombank, in close contact with another very active Bolshevik financier,

EIRNS/Stuart Lewis

Soviet Ambassador Yuri Dubinin (left) and Armand Hammer in Washington, January 1989. The Hammer family's cozy ties to the Soviet government date back to the Bolshevik Revolution of 1917.

Olof Ashberg. Schacht would become Hitler's economics minister, and his economic policies were implemented by the Nazi regime.

There's much more involved here, but this should suffice to illustrate the financial side of the strategic geometry in which Julius Hammer launched his career. A coordinated effort was under way by international bankers and financier families to halt the progress of humanity at all costs. If you are an imperialist, the upgrade in cultural productivity embedded in the two proposed rail systems of the time, the Berlin-Baghdad and the Trans-Siberian, simply had to be stopped. These American System-styled projects, now as then, represent the absolute dissolution of British imperial sea power: absolute end-game for the British imperial oligarchy. This hereditarily Venetian oligarchy sent out its footmen in the form of this professionally (and, actually) intermarried group of financier slime mold, allies to neither nations nor political parties, who controlled the operatives to which the errand-boy Hammers were to report.¹⁰ These American bosses, then as now, were interested in wrecking any standing threat to the British Empire, and would go on to create Benito Mussolini, Adolf Hitler, et al., to this end.

8. LaRouche PAC Documentary, "Firewall: In Defense of the Nation State," www.larouchepac.com.

9. The combination of Friedrich List's Germany in economic cooperation with a modernizing Russia was too dangerous a prospect for the oligarchy, and I think it is important here to keep in view the crucial role of the proposed Berlin-to-Baghdad railway, a threat every bit as dangerous to the British Empire as the Trans-Siberian. From the Russian perspective, Witte wanted to drive the Trans-Siberian through China, and out to Japan, as a way to incorporate these nations into the project, and thereby normalize relations with them; hence, the London-directed Russo-Japanese war. The Berlin-Baghdad run would open up new routes of trade, freeing all parties involved from reliance on British imperial sea-routes.

10. Lyndon H. LaRouche, Jr., Project A (Ch. XII: "A Self-Conscious Scientific Method"), reprinted in *The Science of Christian Economy* (Washington, D.C.: Schiller Institute, 1991), p. 162.

2. Gore's Sponsors

Julius Hammer, upon obtaining a two-year degree at the Columbia College of Physicians and Surgeons, opened up a chain of drug stores, the profits of which went directly into the Socialist Labor Party; in this endeavor, he would, through his political contributions, drive his business into bankruptcy. His son, Armand, he would name after the "arm and hammer" of the socialist standard. His mentor, Boris Reinstein, brought Julius to the 7th Congress of the Socialist International, held in Stuttgart, Germany, in 1907. Here, he met with Vladimir Lenin, who tasked Hammer with creating a Bolshevik party in the United States.

The Communist Labor Party and Communist Party, U.S.A. were the fruits of this labor; as Hammer and Ben Gitlow were thrown out of the Socialist Party for agitating for Lenin, they found they had to form their own institutions. To run the money-operations into Soviet Russia, Hammer formed the Allied Drug and Chemical Company, later to become Allied American Corporation, maintaining its account at Midland Bank in London.¹¹ Allied American would come to have branch offices in London, Berlin, Riga, Kiev, St. Petersburg, and Moscow.

The money-operations run by the Hammers included an underground abortion clinic for which the senior Hammer went to jail: Armand reportedly tried his hand at abortion, and killed Marie Oganessoff, the wife of a Russian diplomat, in the process. Julius took the fall for his son, and served in prison from June 1920 to April 1923 for this. The Hammers secured an exclusive deal with the Soviet government to offer money orders to Russians in the United States, to be purchased and sent off to Russia to be redeemed by family members there. As commercial attaché, Hammer would be utilized by Ludwig Christian Alexander Karlovich Martens, head of the Russian Soviet Government Bureau, as a fence for stolen diamonds and other booty. Later on, another ploy was forged Russian art: a few originals were paraded around to attract the attention of certain circles in the United States, to further the social network on behalf of the Bolsheviks, and then forgeries were sold to generate cash. A fabricated biography, *The Quest for the Romanov Treasures*, complete with an introduction from Walter Duranty of the New York Times, was circulated to give cover for this operation. Ar-

mand Hammer would go on to create the Armand Hammer Foundation, ostensibly a house of fine art; but Hammer cared for art only as long as it were politically useful.¹²

As Neil Lyndon, who travelled around the world with Armand Hammer and Albert Gore, Sr., and wrote Hammer's second biography, "Hammer", while serving on Hammer's staff writes:

Hammer owned Al Gore, Sr. Hammer kept Gore, as he liked to say, "in my back pocket." When he said this, Hammer would touch his wallet and chuckle.

Throughout the whole of his life, Al Gore, Sr. and his family depended on pay-outs, kick-backs, and subventions from Hammer. Like his father before him, Albert Gore, Jr.'s political career was lavishly sponsored by Hammer from the moment it began until Hammer died, only two years before Gore joined Clinton in the 1992 race for the White House....

The few people in the world who know about their close involvement have always been dryly amused by Gore's Mr. Clean reputation, a reputation Gore's illicit fund-raising activities in the Presidential election of 1996....

Hammer enjoyed and exploited outright ownership of Al, Sr.'s political career—as Congressman and later Senator of Tennessee—and even insinuated himself ineradicably into the Gore's family life. He sent the Gores an expensive piece of antique silver every Christmas....

Along with the silver, Armand Hammer handed over controlling interest in Shadow Isle Farm to Gore, Sr., as a way to line Gore's pockets and fatten him up, so to speak. Gore would send reports to Hammer, with a check for his share in the company, and a thank you note for that year's gift of silver. In these letters, he marvels at how his prize Aberdeen Black Angus calves would receive double their value at auction: Purchase of these calves at over-inflated prices proved quite a stealthy method of bribery. Later, Albert, Sr. would become executive vice-president of Hammer's Occidental Petroleum Corporation, the wealth of which Gore was instrumental in bringing about. Hammer used this wealth to purchase Island Creek Coal Company, the company that owned the company

11. These covert financial operations were run by Hammer in the decade or so before the United States officially recognized the Soviet government.

12. Steven P. Meyer and Jeffrey Steinberg, "The Congress for Cultural Freedom," *Children of Satan*, LaRouche PAC, August 2004, p. 203.

US Department of Transportation

The late Al Gore, Sr. (right) was a life-long property of Armand Hammer. Here he is shown with his son, who rakes in personal slush from Hammer's Occidental Petroleum (Dad was the executive vice president). The Hammer-Gore Island Creek Coal Co. inspired the popular song "Sixteen Tons" (see www.larouchepac.com/16-tons for an updated musical rendition).

store of the famous song, "Sixteen Tons," and the third-largest coal producer nationally through the 1970s, while seating Al Gore, Sr. as chairman of the board in 1972. Occidental yielded Gore \$750,000 a year as a board member from semi-retirement in 1983, until his death in 1998. "Oxy," and its subsidiary mining company, Occidental Minerals, provides Gore, Jr., with personal slush to this day.

In return for a life of comfort, Al Gore, Sr. was put to work on Hammer's behalf. From 1950 to 1968, while serving as a Congressman and, later, as U.S. Senator, Gore, Sr. did Hammer's bidding. When Hammer needed to have his FBI files expunged of decades of FBI surveillance reports, identifying him as a suspected high-ranking Soviet agent, Gore was there. When allegations of bribery in obtaining government contracts, which were later proven true, came up in the Senate, Gore defended Hammer on the Senate floor. When Hammer needed an introduction to a prominent Democratic politician, Gore was there. In 1961, Gore introduced Hammer to President Kennedy, who reluctantly granted permission for

Hammer to say he represented the United States in meetings with the Soviet leadership. Afterward, Gore would forward a memo written by Hammer, "A Memorandum on the Berlin Problem," to Assistant Secretary of State for European Affairs under Kennedy, Foy D. Kohler, with the advice that Hammer ought to be sent in to solve any further crises in the region.

It was during this trip to the Soviet Union that Hammer stopped off in Libya to prospect for oil concessions for Occidental Petroleum, concessions which would turn out to be pay-dirt for Hammer and Gore both. According to Hammer's biographer, Neil Lyndon, "Al Gore, Sr. was at Hammer's side on the day he paraded King Idris up a red carpet laid on the desert to open the new field."

To secure these deals, Hammer worked on King Idris and Omar Shelhi, Idris's

adopted son, who was in charge of oil concessions, from several sides: Al Gore, Sr. operating from the Senate Foreign Relations Committee; circles around gangster Meyer Lansky (with whom Hammer had done business in the '40s and '50s); and a "Swiss businessman" named Hans-Albert Kunz, a bonafide member of Italian Freemasonic lodge P-2.¹³

It is also of note that Al Gore, Sr. had ties dating to 1954 with Sir Henry Kissinger, who has admitted publicly to keeping the British Crown better informed of U.S. policy than the United States, when he was Secretary of State. They shared, among other things, a determination to prevent the development of ballistic missile defense systems, as any such defense would hamper their pursuit of world rule through threat to use the bomb: the doctrine of Mutual and Assured Destruction (MAD). Indeed, after witnessing a nuclear test in Nevada in 1954,

13. Claudio Celani, "Strategy of Tension: The Case of Italy," *The Synchronist*. Resurgence behind the Madrid Train Bombing of March 11, 2004, LaRouche in 2004 Special Report, June 2004.

Gore, Sr. would suggest a "de-humanized" or "sterilized" zone in Korea, created by a massive atomic bombing campaign.

The elder Gore also fought in the halls of Congress against Civil Rights legislation.¹⁴

3. Redcoats vs. Red-Blooded American Patriots

With this kind of pedigree, it should come as no surprise that Albert Gore, Jr., would be found working closely with Soviet Prime Minister Victor Chernomyrdin, defending one another as they fought, like a pair of rabid dogs, to take over the top of their respective governments. And that Gore would be found in the middle of the Golden ADA looting operations of post-Soviet Russia. Nor would one be astonished, upon surveying the VIP section at George H.W. Bush's inauguration, to find Armand Hammer there, as the personal guest of Albert Gore, Jr. With this sort of background, it were fitting for Gore to have worked in the U.S. Senate on behalf of Canadian oligarch Maurice Strong's associate Peter Munk, founder of Barrick Gold. Indeed, given the environment which shaped Gore's political and moral outlook, it would be astonishing were Gore not advocating the types of genocidal policy typified by carbon-caps and other varieties of "Bio-Foolery." But to leave it thus, to have fattened Al's family history as a sort of apology and excuse for his behavior, were a great fallacy.

With his Blood & Gore hedge fund (Generation Fund Management), his ties to Prince Charles, his post as an official climate advisor to British Prime Minister Gordon Brown, Gore continues as a British operative to this day. It is here that we see the nature of Synarchy, the left-right policy of Liberal Imperialism: the right as typified by Vice Presi-

Lyndon LaRouche illustrates his triple curve pedagogy for the breakdown of the current global financial system and outlines the steps we need to take for an FDR-style recovery now.

dent Dick Cheney, and his connections to the Crown via Lynne Cheney; the left as typified by Gore, both of which coincide at 10 Downing Street. Remember that the infamous "16 words" in President Bush's 2003 State of the Union speech, justifying war against Iraq—words of Downing Street memorandum fame—were a stove-pipe operation to manufacture evidence to fit an intent: to draw the United States into another suicidal war, to crush her, as if of her own volition, on behalf of the British Empire.

We see, as our leaders bend over like so many reeds in the winds of popular opinion, where the so-called left and right coincide in the face of fascism. One could watch as our sophist leaders allow themselves to be carried away by the currents of this strategic geometry, a tragedy, which they, intentionally or not, fail to comprehend.

Lyndon LaRouche has not only identified this strategic geometry, but is constantly acting to alter it fundamentally, posing an existential threat to the British system, as in the tradition of Lincoln, Witte, Bismarck, and Franklin D. Roosevelt. Typical of this is LaRouche's call for an interconnected world rail system, on the basis of a Four Powers grouping of the sovereign nations of the United States, Russia, China, and India. This policy statement, which is already being heeded by wiser

14. It is also of note that Armand Hammer would go on to create the "Armand Hammer Conference on Peace and Human Rights," as a replacement for the Pugwash conference, and spent the end of his life lobbying for the Nobel Peace Prize.

circles of influence world wide, is the only real option on the table for dealing with the profound physical economic and financial collapse overtaking us today. Mr. LaRouche is working to provide us all with the opportunity to create new policies based upon reason, whereas most of our policy-makers, elected and institutional, are letting their strategic environment dictate their own, and thus civilization's, existence.

Mr. LaRouche's recent proposals on how to protect the population of this Earth from the hell-fire of a disintegrating international financial-monetary system, to defend and develop the generations of mankind yet to be, ought to be the benchmark by which any candidate, at any level of our republic, and elsewhere, should measure their worthiness and credi-

bility.¹⁵ To stand up and defend this republic from backwardness, enslavement, and the degradation of the sanctity of the individual human soul; to do God's good work, in the further elaboration of this universe of ours, is the most noble course of action one can take in this life. It's in your hands, on behalf of the future, to determine whether we will have tragedy, or success. Humanity requires you to act from this standpoint, on behalf of future generations of mankind, and on behalf of our hard-working predecessors, with the understanding that you are only allotted one death. What will it procure?

The real question thus posed, is, what are you doing to secure this precious republic?

Al Gore: The Compromise(d) Candidate

By Ed Hamler

Al Gore's July 17th 2008 speech in DC calling for U.S. energy to become 100% renewable in 10 years is a clear statement of the current fascist political option in the current U.S. Presidential elections. The British are now positioning former President of Vice Gore to become the next President as a compromise candidate, with the knowledge that there is now a huge, but orchestrated split within the Democratic Party.

The danger in this situation lies in the fact that since 1968 the people of our nation have become more and more susceptible to fascist ideas, fascist ideology, and fascist personalities such as Al Gore. In fact today, Gore is actually the champion of a British created fascist movement in the United States, known as the Baby Boomer Generation. Lyndon LaRouche explains:

"The Baby Boomers are not a generation; they are a fraction of a biological generation, chiefly from among those born during the immediate post-war interval 1945-1958, who, like their representative, and former Vice-President Al Gore, express their breeding in neo-Malthusian forms of hostility to physical scientific progress in industry, agriculture, basic economic infrastructure, and Classical artistic culture generally. In the extreme, they were the "turn on, tune in, drop out" generation. They did not become this "naturally," "spontaneously." They were the products

of a design, often recognized as "existentialism," based on such included elements as "information theory" and fads akin in spirit to those of the "Lost Generation" of post-World War I, 1920s and 1930s Europe.

"From Spring 1968 onward, what was emerging as the clearly defined majority of the so-called "New Left," in both the U.S.A. and elsewhere, was essentially the rise of a fascist movement, as the close examination of the second 1968 Columbia University student strike should have warned any close observer who was thinking seriously.

On August 15-16, 1971, President Richard M. Nixon acted as I had repeatedly warned as a likely development for about that time. He repudiated the Bretton Woods fixed-exchange-rate monetary system, which had been launched under the initiative of President Franklin Roosevelt, an action by President Roosevelt which had saved the world, for the time being, in 1944-1945.

Over the course of the 1970s, this proto-fascist current of the so-called "New Left," played an increasing role in shaping political change in Washington, D.C. They were the "anti-blue-collar" support for the breakup of the Bretton Woods (e.g., pro-industrial) system, and for the campaigns conducted by the Trilateral Commission, and for the "cultural-paradigm down-shift" in general.

As I warned orally, and in a widely circulated, featured pamphlet, published on August 31, 1971, this action by President Nixon opened the door for steps toward bringing a fascist world order down the road, unless the change in policy were reversed."

15. Lyndon H. LaRouche, Jr., "Free Trade vs. National Interest: The Economics Debate about Russia," EIR, July 4, 2008; also, LaRouche, "From Shakespeare's Principle of Tragedy: Ambrose Evans-Pritchard," EIR, July 11, 2008.

H.G. Wells disciple and futurist kook Alvin Toffler was the father of Al Gore's and Newt Gingrich's Congressional Clearinghouse on the Future. The Clearinghouse was set up to forecast the effects on government policy, especially the effects on population growth in order to have excuses to drastically reduce it.

Today, their most notable figure is the Prince of Wales' accomplice, former Vice-President Al Gore of "Global Warming" hoax notoriety. Without the specific kind of intellectual "degeneration" fostered in the ranks of the special social-class of the 1945-1958 "Baby Boomers" such as Al Gore, the presently on-rushing threat of a fascist regime in the U.S.A. today would not have been possible."

-Lyndon H. LaRouche, Jr., "The 68ers Reviewed: Under their Skins" EIR, Jan. 18, 2008.

Gore, as the leader of that movement, has done everything in his power, in and out of government, to make the aims of that generation and its creators the order of global affairs.

Gore and the Futurist Freaks

In the early days of Gore's political career, he adopted the New Age philosophy of weirdo Alvin Toffler. Toffler's Futurist philosophy, a direct evolution from the ideas of H.G. Wells, was integrated into the U.S. government beginning in the 1970's around the build-up of information gathering organizations to read "trends" so that lawmakers could deduce the future impact of today's policy decisions.

H.G. Wells was the face of post 1890's British imperialism. His policy method was to forecast "crises" in the future based on the rate technological advances were occurring in society, along with other developments caused by man's creative activity. He called for an intellectual elite to set up institutions outside of government, to "manage" those crises. These technological developments were only crises in the sense that they represented a threat to the empire as real human creativity naturally does, so management of such crises consisted of wiping out those things that threatened the existence of that empire through orchestrating world wars, and denying technological progress to the vast majority of the population with a similar policy of mass genocide toward those peoples.¹

By 1974, even before Gore entered the House of Representatives, an official amendment to the House Rules demanded that all legislation which the U.S. Congress introduces, could not be put forward unless it was accompanied by the data gathered through a futures study, which described how any given policy would impact the future. The argument for this change was later adopted by Gore in his program to Reinvent Government. They claim that legislators were elected to make legislation, and don't have the time and resources to look into the future effects of today's policies. So they were offered a computerized data management system which presumed (a priori) certain crisis trends, and

1. See H.G. Wells, *Anticipations: Of the Reaction of Mechanical and Scientific Progress upon Human Life and Thought* (1906), and *The Open Conspiracy* (1931).

then factored in how proposed policies would contribute to or detract from the progress of crises, particularly "overpopulation" or the "depletion of natural resources."

In 1975, the Tofflers organized a conference "at the request of Congressional Democrats" on futurism, and "anticipatory democracy" attended by Newt Gingrich. The conference led to the creation of the Congressional Clearinghouse on the Future, which was launched as a new wave in integrating Toffler's kooky futurism into the government. As soon as Al Gore was elected to the House of Representatives in 1976, he became chairman of the Congressional futurist cult, encouraging Congress to take "a peek into its crystal balls." Later, Gingrich would join its Executive Committee. The Clearinghouse devoted itself to "futures research and forecasting" and pushed legislation to mandate Congressional and Executive reports which predicted doom unless the science-driven industrial base of the national economy was collapsed. These dismal, anti-scientific forecasts encouraged the spread of environmentalism (post-industrial society) and "zero population growth" policies, through restricting the use and development of cutting edge technology, particularly nuclear power. In his 1972 psychedelic documentary, "Future Shock," based on his novel of the same title, Toffler echoes Wells saying:

"I think we must begin to say no to certain kinds of technology and begin to control technological change, because we have now reached a point where the technology is so powerful, and is so rapid, that it could destroy us unless we control it. But what is most important is that we simply do not accept everything that we begin to make critical decisions about what type of world we want and what technology we want."

This policy was followed by a cascade of pro-Malthusian policy papers, such as NSSM-200, and the Global 2000 report, clamoring that limited resources and the growth in the world

Lincoln's defeat of the London-backed Confederacy, and the creation of a consolidated United States through the development of the transcontinental railroad, marked the beginning of the end of the British Empire as a maritime power. H.G. Wells's was the face of the new post 1890's British Empire. The main objective of the new empire was not to recolonize former colonies, but to destroy civilization itself, and stand victorious among the rubble. Wells's Open Conspiracy became the road map along this new imperial route, in which the targeted enemies of the empire were, technological advances, increased standard of living, and sovereign nations as a means of achieving those ends. Whether explicit or not, Al Gore is essentially a Wellsian.

population, particularly in developing countries, presented a threat to U.S. national security and economic growth. Typical of the function of these reports was the Global Resources, Environment, and Population Act of 1983, which encouraged "population stabilization" and was aggressively opposed by the LULAC (League of United Latin American Citizens) for its targeting of U.S. minorities for depopulation:

"The major purposes of this proposed legislation are to: 1. establish in the Federal Government a glob-

al foresight capability with respect to natural resources, the environment, and population; 2. establish a national population policy; and 3. establish an interagency council on global resources, environment, and population."

Later, in his capacity as a U.S. Senator, Gore introduced the Critical Trends Assessment Act into the Senate in 1985, calling for the implementation of a fascist advisory committee which the President of the United States would have to defer to on futures planning. Gore's own commentary on this was published in the March 1, 1990 issue of *The Futurist* magazine:

"In 1985, I introduced a bill in the U.S. Senate that would get the federal government to do something it rarely does in depth—consider the future. The idea behind that bill—the Critical Trends Assessment Act—was to gather the vast array of complex information about trends in our society and throughout the world economy and environment and put it to work in public policy decision making."

This Act would have required the executive branch to provide a report on "critical trends and alternative futures" covering the next twenty years. It must describe the relationships of such trends to economic, technological, political, environmental, demographic, and social causes and consequences. The role of the office was to infiltrate the office of the president and manipulate the perception of how policy affects the future.

Fortunately, all of Gore's insane Clearinghouse legislation got shot down in Congress and Gore would have to take his obsession with rabid population reduction, and deindustrialization somewhere else. Unfortunately, he took it to the White House."

Al Gore: President of Vice

In 1992 before Gore became Vice President, DNC staffer Jonathan Sallet was assigned by the Clinton-Gore campaign to write an opposition memo to Al Gore's environmentalist manifesto *Earth in the Balance* as a warning to people like Clinton himself. Much of it was published in the pages of the *Wall Street Journal* of August 13, 1992:

"Al is not qualified to be Vice President..."

"He has no principles. He admits he has voted for programs in which he does not believe..."

"He's apparently guilt-ridden about the role of men in society and, perhaps, as a result of his own

weakness, believes America as a whole is psychologically dysfunctional..."

"He's a bad scientist who doesn't care enough to get his facts straight. The fact is we can't be certain that global warming or the level of CO2 or even the changes in the ozone layer pose a threat as burdensome as the cost of Al Gore's proposals. Al is a radical environmentalist who wants to change the very fabric of America."

"He criticized America for being America—a place where people enjoy the benefits of an advanced standard of living. He has no sense of proportion: He equates the failure to recycle aluminum cans with the Holocaust—an equation that parodies the former and dishonors the latter."

"He is a Luddite who holds the naïve view that technology is evil and wants to abolish automobiles..."

"If Al Gore has his way, we would give up America's jobs and destroy the economy."

That's exactly what Gore set out to do. Gore's mission in this period was to use the occasion of various scandals launched against President Clinton to act as a defacto President to implement his British masters' imperial policy. In 1993 the National Partnership for Reinventing Government was set up by the Vice President in the Clinton Administration.² Gore's premise for this was based on the claim that "nations have realized that they cannot make the most of the Information Age with the creaking governmental machinery of the Industrial Age." Since we are now in an information or free market economy, "governments must be lean, nimble, and creative, or they will surely be left behind." Gore was essentially calling for the abolition of the nation-state, in favor of a fascist society controlled by those who create, and regulate "information". Nations were seen as merely instruments to enforce the rule of oligarchy, not as fundamental institutions committed to the General Welfare of their respective populations. Therefore Gore's foreign policy was diametrically opposed to the "good neighbor" style policy of Bill Clinton. This conflict played out through the entirety of the administration.

Later, in 1994 he collaborated with his longtime futurist colleague, American Revolution revisionist and self-proclaimed Jacobin Newt Gingrich. When Gingrich became the Speaker of the House of Representatives he unveiled his

National Archives

Keep your friends close and your enemies closer: Vice President Al Gore and Speaker of the House Newt Gingrich very close to President Bill Clinton.

"Contract With America" as the spear point to his so-called Conservative Revolution in Congress. President Clinton, who sought to be loyal to the traditional Democratic base, was under enormous pressure due to the shift to Republican control in both houses of Congress, but it took "inside man" Gore to get him to go along. Gore utilized the 1994 election to get President Clinton to approve Gore's "reinventing government" scheme--essentially a plan to slash the wages and workforce of the Federal government. The program ultimately eliminated at least 351,000 Federal jobs. The follow-up came through Gore's collaboration with former Presidential adviser (now neo-con commentator) Dick Morris. As

documented by Morris in a 1999 book, Gore and Morris literally conspired to manipulate, and batter, President Clinton in strategy meetings in the spring of 1995, so that Clinton would agree to sign the "welfare-to-workfare" bill that was at the center of then House Speaker Newt Gingrich's Contract with America.

Following the near disintegration of the world financial system on the heels of the LTCM crisis in 1998, the Asian market crisis, and the Russian GKO bond collapse, President Bill Clinton repeated the call of Lyndon LaRouche to introduce a "new global financial architecture." In the midst of his close dealings with the economically devastated nations in Asia, and Russia especially, Clinton was hit hard, but not unexpectedly, from within his own administration.

Even before that, the Clinton Administration was engulfed in the Whitewater scandal. This and similar operations proved to be very convenient for Gore, as they jammed up the President's ability to shape policy, leaving Gore to manipulate things behind the scenes. For example, Gore had been given strong power in Russian policy-making decisions as part of a bi-lateral structure called the "Gore-Chernomyrdin Commission." During this period

Gore was personally committed to Chernomyrdin, who was the former head of Gazprom, and who was fired as Prime Minister under Yeltsin later for his plotting—with Gore—to overthrow Yeltsin and take the premiership. Chernomyrdin was allegedly guilty of corruption, according to the CIA and other sources, for his involvement in the looting of the former Soviet Russia through diamond smuggling in the black market, set up by a San Francisco based company called Golden ADA. When *Reader's Digest* reported that the Golden ADA scandal could become "Russia's Watergate" in 1998, it suggested that Gore could have been influential in the decision to shut down the Davidson-Zhirov probe into that case.

That same year Russia decided to place a 90-day freeze on some of its foreign debt obligations and suspend other payments. This exploded into a full-fledged crisis globally. Yeltsin immediately fired his then Prime Minister Kiriyenko before he could enact emergency measures. Behind the back of the President, Gore made a series of phone calls to Chernomyrdin for the purpose of creating a scheme by which Yeltsin would nominate Chernomyrdin as Prime Minister. President Clinton was furious that he was not informed of this. Chernomyrdin was Gore's choice because he vowed to bail out the financial system. This was opposite the Clinton policy of collaboration on economic development without IMF conditionalities. It was during this period that Clinton echoed Lyndon LaRouche, calling for a new economic architecture.

Gore also weighed in on the exploded financial economy that had been racked by the 1998 LTCM crisis. Gore's representative, Elaine Kamarck, had a breakfast consultation with major financial players that had been smashed when the Russians defaulted. According to sources, the head of D.E. Shaw hedge fund attended. D.E. Shaw was nearly wiped out by the Russian default. None other than George Soros also attended. Shaw had been the biggest donor to Gore PAC during his Presidential run and made substantial contributions before that, so the Vice President had a very large financial stake in the survival of Shaw's fund.

In 1998, President Clinton came under immense pressure to launch an aerial bombardment of Iraq. He was filtered information through the Gore-dominated Principals Committee, a presidential advisory group on foreign policy. The Committee claimed that Saddam Hussein was not complying with UN weapons inspectors and was likely building weapons of mass destruction. This push for an Iraq war is not surprising, considering Gore's comments in his 1992 book, *Earth in the Balance*:

"It is a tragedy that the people of Iraq will have to suffer ... economic stagnation, but they have to get the 'message' that Saddam Hussein is the 'cause of their misery...In general, the world does not need the contributions of Iraqi space science or of Iraqi work in nuclear physics—practical or applied. The U.S. should work to completely block future Iraqi activity of any kind in these areas. There is no way to think about certain branches of science and engineering in Iraq except as tap roots for programs aimed at programs of mass destruction."

Under the threat of an explosion of productive, cutting-edge technological breakthroughs (which would, inevitably raise the standard of living of the population, and its total numbers), Gore orchestrated the 1998 Operation Desert Fox. This was intended to jam up collaboration with larger nations like Russia and China, and isolate the U.S. to ensure that the Roosevelt-styled "new global financial architecture" was not put in place.

The President did much to avoid war. He sought cooperation with new Prime Minister Primakov, and U.N. Secretary General Kofi Annan, which held the whispering lags at the Principals' Committee at bay and managed to secure an agreement with Saddam Hussein to allow the UN Special Commission weapons inspections to resume. However, as soon as Clinton flew off to Tokyo for a diplomatic event, British Fabian Prime Minister Tony Blair sent his Defense Minister, George Robertson to Washington, D.C. to meet with the Principals' Committee in order to get the Iraq bombings started as fast as possible. In December of 1998, Clinton left for the Middle East for peace talks with Israeli Prime Minister Netanyahu. Again, behind Clinton's back, it was Gore, his foreign policy advisor Leon Fuerth, and others in the Principals' Committee, that put massive pressure on the President to resume the bombing raid on Iraq. The Chairman of UNSCOM issued a false report on the status of the inspections, saying that Iraq had violated the inspections agreement. Gore took this phony report and told the President, who was in Israel, that the Principals Committee had reached a "unanimous agreement" to bomb Iraq. A few days later it happened.

Post-Gore World

Following his attempted Wellsian overthrow of the Clinton Administration, and his defeat by George W. Bush in the 2000 elections, Gore seemed to disappear into political obscurity. When he resurfaced in 2006 with *An Inconvenient Truth* he returned twice as big, and even more committed to his genocidal depopulation policies. During those intervening years, Gore was doing what any good and obedient British agent would do: prepare for the next deployment.

Gore's current assignment, as presented in the LaRouche PAC feature video 1932, is to position himself as a "compromise" or "unity"

creative commons: mecredits

Al Gore's Current TV: Kingmaker of American Idles.

candidate for the U.S. Presidency, a compromise to the two leading Democratic candidates, if there is a fight at the August 2008 Democratic National Convention, or if Obama drops out of the race. The political environment is definitely ripe for the British to dispose of Obama, and if the Gore option is not completely destroyed, you might as well consider the United States as just another landmass in a utopian British empire very soon. Ironically, that empire itself will not survive under those conditions. It will destroy itself and civilization, reducing the population from the current level of 6.5 billion to about 2 billion. This would be no accident of "economic" trends. This is precisely what Gore called for in his *Earth in the Balance*. This is what a Gore presidency would look like, and this is what must be prevented today.

In 2001, Gore did not fall off the face of the Earth as much as he fell deeper into Wells' and Toffler's information society. Gore's commitment to the "Information Age" remained firm, and he put full emphasis on indulging and expanding the "Information Age", non-productive, get-rich-quick ventures. This included advising Internet companies and holding large shares of stock in them, starting an "independent" cable TV company, and even starting up a few hedge funds. Gore made a killing on all of these

ventures and has now become a multi-millionaire.

He became an advisor to Google, and bought tons of shares originally estimated at \$85/share, which in a matter a few years, rose to \$400 a share. By 2007, his shares were worth \$30 million. Also, when he became a director of Apple in 2003, he got about 60,000 stock options, originally valued at \$7.48 each. In 2007 they were valued at \$124 a share, a total worth \$6 million.³

In 2005, Gore poured a ton of money into the promotion of YouTube-like movies getting air time on his TV network, Current TV. Around this period, young adults from the ages of 18-25 became more susceptible to flights from reality at the prompting of an

increasingly insane Bush Administration and a collapsing world economy. The reelection of George Bush had a devastating effect, and many demoralized youth felt that cyberspace was a place to put their tattered souls to rest (quite literally!); but Al Gore saw it as a business venture.

Current TV allows viewers to post videos of random and often pointless news items on any topic ranging from the war in Iraq to hyper-color t-shirts to edible antifreeze. Users can vote up the videos that the online community thinks are the best, and the chosen one will end up on the air, even if it is the one about Britney Spears doing squats at the gym. News reports are trivialized and diluted in the saucy "hipness" of Baby-Boomer existentialism, and presented as mindless entertainment. Current TV is geared toward the 18-25 year-old generation and is shown in 51 million households in the US, UK and Ireland. It said that Gore got \$1 million in salary and bonuses last year, and owned 3.7 million shares of company stock. As of 2007, Current TV was raking in \$63.7 million annual revenue. Current TV is currently filing for a \$100 million Initial Public Offering (IPO) to up the ante.

The year following the creation of Current TV, when Gore released his *Inconvenient Truth*, not many people knew that he had been a big player in the financial world, especially in hedge funds and venture capital five years before, in

World Economic Forum

Al Gore at the Davos World Economic Forum in 2008

2001. That year, Gore became vice chairman of Metropolitan West Management hedge fund, whose chairman was junk-bond swindler Michael Milken, who was jailed for insider trading. The funds' strategy was typical of the post-LTCM financial frenzy. This particular fund specialized in securitizing debt, and then lending it to other funds which would then hedge against it. This debt can be anything from securitized mortgage contracts (mortgage backed-securities) to people's pension funds. So, when a firm like Met West lends "securities," it's like giving a child an empty box for Christmas—only the child is ecstatic, because he actually believes there's something there. But it's worse! So, in this market there are endless claims being made on debt that no one can actually honor. If everyone who "has claims" on this debt actually called it, the whole banking system would blow at that point, for people would scramble to take their money out of the banks at the realization that the money doesn't actually exist, but only the debt. It was

precisely this kind of insanity that fueled the so-called "sub-prime" crisis later, and the current hyperinflationary blowout now. Gore was a key player in this.

Also, ventures such as David Blood & Gore's British London-based offshore hedge fund, General Investment Management, established by them in 2004, are the same thing but more attractive in our currently programmed eco-friendly society. They claim to set out to curb the effect of climate change on society through investment in companies that reflect "sustainable" markets and selling carbon offsets.⁴ Among the list of companies are Whole Foods, General Electric, and Staples. But the real scheme is to force nations and their economies to conform to the inevitability of the non-existent climate crisis. Agreements like the Kyoto Protocol and others have already called for a cap on CO₂ emissions to bring those levels back to where they were in the 1990s over the period of 2008-2015, a purported 5% drop. Gore's hedge fund specializes in the market that trades carbon credits on the basis that underdeveloped nations merely "sustain" current levels of technology (which is little to none) and not develop into modern industrial economies, to, nominally, prevent man-made climate change. Developed nations can buy a "right to emit" certificate from an underdeveloped country, called a carbon credit, that allows developed countries to freely "pollute" as long as they pay poor countries not to. On top of that, who knows what kind of financial speculation occurs in this kind of market!

More recent developments include Gore's occupation as an official advisor to the British Crown on climate change, and he has discredited many prized institutions by being honored with awards from them. From 2000-2008, Gore carried out more of his Wellsian fantasies outside of government than were allowed when he was inside. Thus, the social groundwork has already been laid for Gore's current mission.

Today, the fascist peoples candidate is preparing to reenter our vastly demoralized government as a Nietzschean version of Captain Planet, who has supposedly "recovered" from the corruption of politics, and is committed to bring "unity" to the party he helped to destroy. Never compromise with the Devil, he may become your next President.

4. See *Al Gore: Too Big For His British Genes*, by Stephanie Nelson, contained in this pamphlet.

Gore's Environmentalism Is Racism!

By Hector Rivas

Many foolish dupes seem to believe that environmentalism has absolutely nothing to do with racism, but they're wrong. Al Gore, is a typical representative of that genocidal freak show known as environmentalism, whose aim is to reduce the world's population drastically, from nearly 7 billion persons today, down to less than 1 billion. Their preferred victims, and Al Gore's favorite meals, are dark skinned people. Gore is simply an opportunistic coward who has adopted the imperial tradition of his owners, the British Empire. Racism, is the policy of that British Empire. It was the policy which gave that Brutish beast the stomach to gorge itself on the lives of South Africans during the latter 19th century, that very policy which inspired Great Britain to organize the African slave trade which they later farmed out to Spain.

The Roots of Racism

The saying, "from Cape to Cairo," typifies the fantasy of the British to expand their empire throughout the continent of Africa. The desire for such expansion was best expressed through that British mouth piece, Cecil Rhodes: "We must find new lands from which we can easily obtain raw materials and at the same time exploit the cheap slave labor that is available from the natives of the colonies. The colonies would also provide a dumping ground for the surplus goods produced in our factories."¹ In 1889, under a Royal Charter, Rhodes' set up the British South Africa Company (BSAC) with the intent of placing the territory north of Limpopo under British imperial rule. The territory was dubbed Rhodesia, which since then has been renamed Zimbabwe as a consequence of the liberation struggle to become independent from that great beast, Britain.

Rhodes' operation in South Africa was a typical imperial scheme to rob the people of their essential resources and never offer to contribute anything worthy in return. The imperial beast, through Rhodes, took control of as many gold and diamond mines as possible throughout the Republic of South Africa. The imperialists moved heav-

ily into Johannesburg, a town surrounded by the mines where the South Africans would work in virtual slave conditions to generate a little bit of income just barely to get them by. On top of that, the British colonialists enacted laws such as the Groups Areas Act of South Africa which designated areas of living called "townships" where all the Africans had to live. The purpose was that they simply did not want the black people living in the cities with the civilized Englishman. This meant that the natives worked like dogs in these mines and in return were forced to live in these "townships" without adequate infrastructure, fresh water, and other basic necessities for survival. Till this day, these townships still exist, still offering the poorest level of infrastructure for the people of South Africa. Utilities such as electricity are not guaranteed to every South African, because of the lack of generators. The Racist outlook of the British brought this upon the South African people which existed back then in the latter 19th century, but the after effects of that brutish policy still torments the inhabitants of South Africa still today.

The question must now be asked: what is Al Gore's take on that racist policy which was first imposed by the British Empire upon South Africa with the intent to keep them backwards?

His Hatred of Africans

Living true for the Empire, Gore as Vice President of the United States, and American head of the U.S.-South Africa Bi-national Commission, continued the brutal genocidal policies of Great Britain against South Africa.

In the latter 1990's the newly elected South African President Thabo Mbeki asserted his country's sovereign right to have full access to affordable generic drugs which would assist the lives of the South African people, who suffered from the HIV/AIDS virus. Through the activation of South Africa's Medical and Related Substances Control Amendment Act No. 90 15(c) of 1997, the newly elected president would have the capability to utilize both compulsory licensing and parallel importing laws. The compulsory licensing laws gave South Africa the ability to negotiate with drug companies to license affordable, generic versions

1. http://www.brainyquote.com/quotes/authors/c/cecil_rhodes.html

of patented drugs in the event of a national health emergency. The laws granted patent rights for drugs found essential to protect the health of its people.

20 million people in Sub-Saharan Africa were infected with the HIV/AIDS virus and the rate of death because of that was more than 5,000 Africans a day. For Gore, the problem was not a lack of infrastructure which man can construct with the intent to increase the living standards of the population, but rather he ignored the AIDS epidemic to focus on that old witches tale "overpopulation". Gore states, "None of our measures will fully succeed unless we achieve population stabilization--one of the most important environmental challenges of all. An overcrowded world is inevitably a polluted one." So, according to Al Gore, why bother building infrastructure? Gore doesn't think infrastructure *should* do anything to protect the health of Africans, because, as he asserts, eliminating the AIDS virus isn't really the issue, but the 'problem' lies in the fact that the world just happens to be "polluted" with too many darker skinned people.

From 1997 - 1998 Gore and his cronies moved viciously to ensure that South Africa did not succeed in attaining affordable drugs, inevitably bringing a smile to Cecil Rhodes, in his grave. He helped impose sanctions and wildly claimed that the government of South Africa was disobeying international law, even though the World Trade Organization has permitted patent rights under conditions of a national emergency, meaning, that like a true typical southern racist, Al Gore lied. Only when South Africa agreed to tear from itself a pound of flesh, did Gore withdraw his threats. 14 million South Africans died, and by now the number has been guaranteed to increase. Gore tried to justify his actions by proposing a total of \$170 million to address the AIDS epidemic in Africa. Do the math, and what it amounts to is a mere \$8 a person, or better stated, approximately enough money to assist the South African population with AIDS drugs for one day.

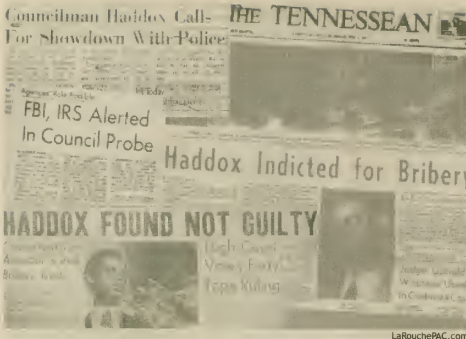

Activists such as ACT UP and representatives

Creative Commons: Reuvenkn

During the late 1990s AIDS epidemic, Al Gore blocked South Africa's request to produce cheap AIDS generic drugs for their population by imposing brutal economic sanctions on the nations. The map portrays the percentages of AIDS victims on the continent from 1999-2002. The darker areas show a greater density of the disease.

of other institutions slammed Gore for his despicable actions against South Africa. During a state Democratic gathering at a church, Gore was confronted by nine AIDS activists who tossed blood money labeling Gore as a "pharmaceutical industry puppet". One of the activists, Eric Sawyer, yelled at the oversized walrus, charging that because of the VP's policies 22 million South Africans would die. Gore offered publicly to meet with the activists, but could not answer to any of the charges that they confronted him with. On June 30, 1999, State Rep. Harold James of Pennsylvania issued a statement posing the question, "Will millions die in South Africa because of Al Gore's policies?" Part of the statement read: "Disturbing reports have come to public attention recently, concerning the apparent role of Vice President Al Gore in denying affordable AIDS medications to... South Africa... Why would Al Gore take actions,

Nashville City Councilman, Morris Haddox, was framed and falsely indicted by Al Gore and his sponsor John Seigenthaler in a series of racist FBI sting operations.

which would unnecessarily increase the suffering and deaths from AIDS in Africa?" Gore would do such a thing because he's an environmentalist.

The Tennessee Swamp

Racism is by no means new to Al Gore. As the evidence proves, Gore has hated colored folk since the beginning stages of his career as a journalist working alongside two pillars of trash, publisher of the *Tennessean*, John Seigenthaler and former FBI investigator, Hank Hillin who targeted black elected officials for prosecution. This in fact is the very same Hillin who led an operation to ram Tennessee Governor, Ray Blanton out of office, during a time when Gov. Blanton was pushing for a more credible investigation into the assassination of Martin L. King Jr. Because of Hillin's success in ousting the Governor, the real story behind King's assassination has never been further pursued.

Before recruiting Gore into one of the most blatantly racist sting operations against Nashville city councilman Morris Haddox, Seigenthaler played a role in sabotaging the District Attorney of New Orleans, Jim Garrison's probe into the assassination of President John F. Kennedy.

Seigenthaler pushed propaganda to defend the character of Walter Sheridan and his apparatus who targeted Garrison's investigation of the JFK assassination, making claims that

Sheridan was a professional investigator who was a close friend of President Kennedy and closer to his brother, Robert Kennedy. Seigenthaler further claimed that "If there was some government conspiracy involved in the Kennedy assassination, Sheridan would have been a man committed to exposing it for NBC." On the credibility of Jim Garrison's investigation, Seigenthaler pompously asserted: "In retrospect, Garrison's charges seem far-fetched because the evidence he finally produced against Shaw seemed so ludicrous, so insulting to human intellect, that the jury rejected it out of hand." Now whether Seigenthaler truly had any concern over Kennedy's murder and the

implications of that to the citizens of the country as a whole, Seigenthaler stated his perspective very clearly in a two part interview recorded December 24, and 26 in 1974 with the Southern Oral History Program:

WILLIAM FINGER: Because this is oral history, too, let me ask . . . if you have the time

JOHN SEIGENTHALER: Sure.

WILLIAM FINGER: It is timely now to look back . . . you know, you sort of skipped over Northern California, those two months. Were you there when Kennedy was shot?

JOHN SEIGENTHALER: Well, I was in Northern California.

WILLIAM FINGER: And what do you think of Lowenstein's stuff now?

JOHN SEIGENTHALER: I feel about . . . let me answer it first. I can't go near any of those assassinations. I wrote a book that didn't seek to probe the question, the unanswered questions . . . Kennedy, King or Kennedy. And I don't really care. I don't really care whether there was a conspiracy or not."

Seigenthaler Recruits Gore

In 1971, serving as a photographer in Vietnam, although he never actually participated in open field combat, Gore fell swiftly into the arms of John

Seigenthaler. It was in 1974 when Gore, as a reporter for Seigenthaler's *Tennessean*, personally arranged with FBI agent Hank Hillin's partners in the Tennessee Bureau of Investigation (TBI) to wire a stooge, furnished with cash, to create the scenario which consequently lead to City Councilman Morris Haddox's indictment on false charges of bribery. Less than two months before Gore's racist attack against the black city official, Haddox had publicly declared that it was the practice of the Nashville police, to allow dope dealing and prostitution to run wild and unchecked in the black community and therefore, asserted that he was determined to block all other legislative matters until the police department was fully reformed.

So the racist establishment brought Al Gore under their wing and moved in to do as their confederate brethren love to put it, "put tha' culla'd boi back in his place." The black community fought back. In a local newspaper, James Mock, the chairman of Concerned Citizens for a Safer Nashville, was quoted saying, "the indictment against Haddox resulted from a scenario written by *Tennessee* publisher John Seigenthaler and reporter Albert Gore....We have no alternative but to see them as playwrights who set up their scenario in the black community and had Mr. Haddox play it out". Mock later in the article is quoted as accusing Gore and his boss of "character assassination".

As far as Gore's career goes, he has always despised dark skinned people and abused his positions of power to destroy them. In the course of time, Gore put on the mask of environmentalism, but the real root behind that movement, is to push the lie that the world is too populated, and that the way to deal with this is to rid the world of colored

fltkr: World Economic Forum

Al Gore would go on to rally his fellow 68ers around the cause of environmentalism, win a Noble Peace Prize, and a general celebrity status, causing boomer women everywhere to faint as he passed by. Little did he know that it was simply from his passing gas.

folks first. Environmentalism is the mask of racism, therefore all participants of that radical movement operate on the nature of that intent, whether they know it or not. The question now, given the uncertainty of the current U.S Presidential election, is, if the option becomes available for Gore to take up the presidential nomination, should he really be given any serious consideration, since it effectively paves the way to establish a racist in the White House.

Al Gore: Too Big for His British Genes

By Stephanie Nelson

Al Gore is evil. Not because of any of the things he does, but because of what he is. He's a British agent. Unfortunately, most Americans, and most people in the world, don't know what that means. One aspect of it is that he's a genocidal racist, or, you could say, an environmentalist. Each is a continuation of the absolute hatred for human beings that the British Empire embodies and which has informed every empire since Zeus' Olympus. The British Empire model rests on an anti-scientific policy of population control, and this

is what the modern environmentalist movement aims for: global depopulation to 2 billion humans or less. To succeed, it would require the destruction of civilization itself.

Bad Religion

The iniquitous Reverend Thomas Malthus received a mathematics degree at Jesus College in Cambridge and became a country parson in the

Reverend Thomas Malthus was one of the first people to push the genocidal theory of zero population growth in his *Essay on the Principle of Population*. His theories were the foundation for the economic system pushed throughout the 18th and 19th century by the British Empire.

1790s. His popular tract, *An Essay on the Principle of Population*, was first published in 1798. His ideas are based on the rather simplistic mathematical theory that human population grows geometrically but resources (food) increase at a slower, arithmetic rate. Poverty, disease, and famine are all problems of overpopulation, he says, and that we should encourage “the operations of nature:” infant mortality, poor hygiene, and plague amongst the poor to keep the population at a desired level. From there, Malthus became Britain’s first political economy professor at the East India Company College (now Haileybury) in 1805, and by 1826 published six editions of that shameful treatise.

A century and a half later, in 1972, Al Gore was attending the Divinity School at Vanderbilt University. In a class called “Theology and the Natural Sciences” he was exposed to a popular book released that year titled *The Limits to Growth*,

which asserted that within 100 years human society (population, industry, pollution, food, etc.) would reach its limit and collapse drastically if we didn’t stop population growth immediately, just as Malthus had described in his time. Like Malthus, the MIT team behind the project also allowed some things to grow exponentially, such as population and pollution, and other things, like technology and agriculturally suitable land, to grow slightly, if at all. Along with all the other environmentalist propaganda in that period, it recruited a lot of people to a belief in overpopulation.

By that time, the world’s population far exceeded Malthus’ nightmarish forecast, without everyone suffering and starving, and continues to do so today. Gore explained this in his 1992 book, *Earth in the Balance*: “Malthus was right in predicting that the population would grow geometrically, but he didn’t foresee our ability to make geometric improvements in agricultural technology. Even today, with several countries in the world suffering massive famines, there is little doubt that a commitment to use more land and newer agricultural methods could vastly increase the amount of food produced on earth. The problem we now face is therefore more complicated than the one Malthus identified. In theory, the food supply can keep up with the population for a long while yet, but in practice, we have chosen to escape the Malthusian dilemma by making a set of dangerous bargains with the future worthy of the theatrical legend that haunted the birth of the scientific revolution: Doctor Faustus.”

Had Gore read his Bible a little more closely, he would not think that to acquire technologies that prevent starvation mankind must strike a deal with Satan. Instead, being made in the image of the Creator, mankind has a unique power of creativity expressed through scientific and artistic discovery, and we can organize our society around those discoveries in order to improve our standard of living. It is when we stop that process—stop being human—that we witness famine and plagues.

This is the same idea that the foremost of our nation’s founding fathers had. In 1751 Benjamin Franklin penned an essay on population, titled *Observations Concerning the Increase of Mankind, Peopling of Countries, Etc.* Encouraging population growth, he states, “The great increase of offspring, in particular families, is not always owing to greater fecundity of nature, but sometimes to examples of industry in the heads, and industrious education, by which the children are enabled to provide better for themselves.” Malthus attempted to refute Franklin’s points directly, and to defend Britain’s policy of population reduction.

Queen Elizabeth and Prince Philip, married in 1946, are second cousins once removed and third cousins. Inbreeding is well known to set families on the genetic downside. In this case, Prince Philip, who wants to be reincarnated as a deadly virus, produced a son who wants to be reincarnated as his wife's tampon.

Gore chose Malthus' side, thus proving himself neither Christian nor American.

Feeble-Minded Brits

Since the early days of the British Empire, its policy was to bring the U.S. back into its fold as part of a global Anglo-Saxon empire, though the specifics have evolved over the years since 1763. Their plan is to take over the world with a "master race," because, as Britain's Cecil Rhodes put it: "we are the finest race in the world and that the more of the world we inhabit the better it is for the human race. Just fancy those parts that are at present inhabited by the most despicable specimens of human beings; what an alteration there would be if they were brought under Anglo-Saxon influence....I contend that every acre added to our territory means in the future birth to some more of the English race who otherwise would not be brought into existence."

Look at how this policy worked in Zimbabwe (formerly called Rhodesia, after this "race patriot"), which the British South Africa Company colonized in 1890. Colonial policy had especially tar-

geted Southern Rhodesia and four other countries, Canada, Australia, New Zealand, and South Africa, to be "white man's country." 1894 figures for Zimbabwe estimate that to every white man, there were 17,000 natives. By 1961, that ratio had changed to 1 white to 13 natives. There is no other word for this but genocide. The British sought scientific legitimacy for their genocide, and named it eugenics.

A supposed "race science" to improve the human species through selective breeding, the eugenics movement, flourished in Britain in the early part of the twentieth century.¹ They wanted to cleanse the human gene pool of moral and physical defectives, criminals, inebriates, the feeble-minded, and the poor—all of which were considered hereditary traits.

Sir Francis Galton is the father of modern eugenics, and wrote *Hereditary Genius* in 1869, about breeding certain successful personalities. In the late nineteenth century the eugenics movement was directed primarily by Sir Arthur Balfour, who rose to become British Prime Minister

1. Despite their rigorous study of genetics, the European monarchies have overlooked the basics of inbreeding, which brings out recessive genes and defects, evident in their offspring.

during the reign of Edward VII and Foreign Minister during WWI. He coordinated the activities of top strategists of the British empire and British secret services, such as the Darwin and Huxley families, as well as subversive operations inside the U.S. The eugenicist idea of a fixed inequality of human beings was a direct attack against the principles of the American Revolution.

The Eugenics Education Society was founded in 1903-07, which became the British Eugenics Society in 1926. The leading institution in the U.S. was the Eugenics Record Office, founded in 1910, in Cold Spring, NY, ran by geneticist Charles Davenport. Eugenics was heavily promoted by racist Anglophiles in the U.S. such as Teddy Roosevelt, Woodrow Wilson, and the E. H. Harriman family.² The first International Congress of Eugenics was held in 1912 at the University of London, keynoted by Balfour, who called eugenics "the first great applied science." In application, eugenicists contrived a biology of class, resulting in bigoted immigration laws and tens of thousands of forced sterilizations.

Sir Julian Huxley was a Life Fellow of the Eugenics Society from 1925, their vice-president from 1937-44, and president from 1959-62, putting him front and center of eugenics' racial hygiene and KKK revival days of the 1920s, through the British-sponsored Nazi genocide, to the semantic shift in the 1960s to "conservation."

In his 1936 Galton Lecture, "Eugenics and Society," Huxley appealed to the upper class to reproduce more, but said the genetically less well-endowed lower strata "are reproducing relatively too fast. Therefore birth-control methods must be taught them; they must not have too easy access to relief or hospital treatment lest the removal of the last check on natural selection should make it too easy for children to be produced or to survive; long unemployment should be a ground for steriliza-

Eugenics was the basis for the "final solution" to the economic problems of Adolf Hitler's Germany. The entrance to the Auschwitz concentration camp reads "Arbeit Macht Frei" (Work Makes Free).

tion, or at least relief should be contingent upon no further children being brought into the world; and so on.... Since a high degree of intellect and imagination, of scientific and artistic ability and other qualities, cannot be adequately expressed or utilized...in the great majority of the lower strata, it is useless to plan for their genetic increase in these strata. Indeed, it is more than useless, it is dangerous; for the frustration of inherent capacity leads to discontent and revolution in some men, to neurosis and inefficiency in others. The case is strictly analogous to that of cattle in Africa; in an unfavorable environment, too drastic genetic improvement is worse than none."

The Unthinkable

In 1946, Huxley was appointed Director General of the new United Nations Educational, Scientific and Cultural Organization (UNESCO), where he continued to carry out the mission of eugenics and global empire. Huxley prepared their official document: UNESCO, Its Purpose and Its Philosophy, emphasizing how important education, science, and culture are for world peace (a much-desired thing in the wake of World War II), and for human progress. He insisted that since mathematical and musical aptitudes are "well known" to have a genetic basis, UNESCO needs to

2. E.H. Harriman's wife heavily supported sterilizing defectives. His daughter, Mary, enrolled in one of Cold Spring Harbor's summer biology courses. She was so enthusiastic about eugenics, she was nicknamed "Eugenia" by her classmates at Barnard College. His son Averell was a partner at Brown Brothers Harriman bank when they funneled money to the Nazis.

The three generations of the Huxley family portrayed, including Thomas, Leonard, and Julian Huxley, pushed the creation of the Eugenics or race science movement, later turned into the environmentalist movement.

be greatly concerned with finding a truly scientific eugenics. To increase human knowledge, and therefore human welfare, he also said that "it will be necessary quite soon to face the fact that only a certain fraction of any human population is equipped by heredity to be able to take full or even reasonable advantage of a full higher or professional education," and cites "some authorities in the field" who assert that that fraction is only 10 to 20%.

If 80% of the population is genetically incapable of being educated, and education is necessary for progress, and progress is necessary for human civilization, is it necessary that we get rid of that 80% holding us back?

Huxley admitted, "Thus even though it is quite true that any radical eugenic policy will be for many years politically and psychologically impossible, it will be important for UNESCO to see that the eugenic problem is examined with the greatest care, and that the public mind is informed of the issues at stake so that much that now is unthinkable may at least become thinkable."

Don't You Care About the Planet?

The other issues central to UNESCO's task were overpopulation and conservation. While at UNESCO in 1948, Huxley co-founded the International Union for the Conservation of Nature (IUCN), whose constitution was drafted by the British Foreign Office. In 1960 Huxley traveled through the former colonies in Africa, where independence was spreading at the time, and criticized the new governments as unable to be trusted to conserve wildlife. To help fund the expansion of IUCN activities, the World Wildlife Fund (WWF, now the World Wide Fund for Nature) was created in 1961.

The head of the WWF has always been HRH Prince Philip, who handpicked the late Prince Bernhard (former Nazi SS officer) and Princess Alexandra (first cousin of HRH Queen Elizabeth) to head the WWF-International, and various other Princes, Sirs, Barons, and royal lackeys as presidents and vice-presidents of local branches of the WWF³. The WWF is, in turn, funded by the secretive "1001 Club,"⁴ whose exclusive membership numbers 1001 people, requires a \$10,000 initiation fee, and is also selected by Prince Bernhard and Prince Phillip. On top of that, the WWF receives incredible sponsorship from the world's leading mining, oil, chemical, food, and banking corporations.

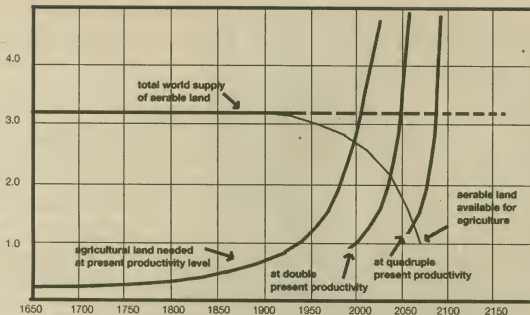

Award-Winning Gore

This is the movement that Al Gore works for. Popular culture would have you believe that Gore's crusade against man-made global warming is the next Civil Rights Movement. In reality, it's the same British eugenics policy for world government.

Were the intention to keep the environment clean, there would be massive investment in crash programs for nuclear power, and CO₂ would be hailed as abundant plant food. However, Gore's solution is London-centered financial speculation. It's called emissions trading, or cap and trade. Emissions trading requires an upper limit on car-

4. *Ibid*.

Reproduction of a chart from *Limits to Growth*; by Chris Jadaat

The chart of the Club of Rome's fraudulent *Limits to Growth*, shows world arable land supply vs. the agricultural land needed for food at present productivity levels.

bon emissions. Countries that produce less emissions have then earned "carbon credits" which they can sell to countries that produce above the limit. There are two authorities in the world that coordinate this, the Chicago Climate Exchange, which is still being developed, and the more dominant European Climate Exchange. Most of their activity is in CO₂ financial derivatives speculation. Furthermore, the environmentalist movement has turned to the United Nations Security Council, with its military powers, to compel observance of global environmental standards.

The real beneficiaries of the cap and trade system are the hedge fund operators making a killing in the carbon markets, amongst whom is Gore. In November 2004 he launched, with partner, David Blood, a London-based investment fund, Generation Investment Management, which is more aptly referred to as Blood and Gore, and is at the center of the effort to create a carbon swap market.⁵

On October 30, 2006 the British government held a high-profile press conference for the release of a 700-page report on climate change by a government economist Sir Nicholas Stern. Chancellor of the Exchequer, and now Prime Minister, Gordon Brown announced there that he had "hired" Gore to "advise the British government on climate change."

In that capacity as a British agent of influence and fund manager poised to reap immense profit, Gore has appeared at numerous venues to promote investment in carbon trading, including in front of the U.S. Congress in March 2007.

"Carbon emissions" means industrial activity. The countries with low carbon emissions are the under developed areas of the world, the ones most in need of industrial development, first to simply prevent mass death due to disease and starvation, and much more importantly, to go far beyond merely sustaining their current levels of living standards. They are the ones historically targeted for the most brutal side of colonization, which cripples them to this day. Without development, the population of Africa will be wiped out.

Neither are the wealthier, developed nations immune to the catastrophes of this scheme. Any emissions reduction mandate would be enforced by the exchanges, which operate by the laws of the free market (a mix between greed and London artistry). It would drive up the price of carbon credits to amounts that would bankrupt power companies and kill industries, and that is precisely the point. The foundation of American sovereignty and economic power was industry and manufacturing, and it is what the British empire fears and hates the most. That is what Gore and the green ideology are out to destroy—civilization.

5. Remember when mortgage trading was just a burgeoning innovation at Salomon Brothers?

Al Gore Doesn't Like Your Government

By Alli Perebikovskiy

If you want a President who opposes the very existence of the nation state, then Al Gore's your man. Over the past decades, that disgusting creature Al Gore has been used as a tool by the British Empire's dirtiest assets, such as Prince Philip, to block any national policy to rebuild our disintegrated financial system according to the principles of Franklin Delano Roosevelt. Instead, Gore's foreign policy has been to destroy relations between nations and to halt economic development. Letting Al Gore anywhere near the leadership of this nation would be the equivalent of inviting death over for dinner.

Philip's Phony Religion

In order to fully understand the sludge that Al Gore emerges from, one must first take a look at the damning case of Gore's close friend and ideological mentor, Prince Philip, Duke of Edinburgh.

Prince Philip, a genocidalist and racist, is one of the main figures working to destroy the institution of the sovereign nation state. Throughout the 1980s, the Prince was actively pushing schemes to bring nations under the control of the World Bank and the UN, whose policies were shaped by the British Empire. He set up a series of interfaith meetings to push his policy of destroying sovereignty and creating a one world, globalized government.

Prince Philip's conferences were ostensibly on the subject of "religion and conservation," and culminated in the famous 1986 Assisi Conference in Italy. With attendees such as Evelyn Rothschild (representing Judaism),¹ Phillip (himself posing as the representative of Christianity), and high scale representatives of the World Bank, the war against the nation state was accelerated. At the conference, Prince Phillip outlined how this assembly must intervene to eliminate the main threat facing humanity: overpopulation and envi-

ronmental degradation. Prince Phillip stated, "The key issue for the conservation of our natural environment is to find ways of protecting it from the consequences of human population explosion."² Phillip and his cronies, dubbed the Alliance for Religion and Conservation (ARC), adopted resolutions based on the Gaia hypothesis, meaning sustainable (aka. zero) development, green energy, prevention of scientific development, eco-fascism, and population suppression. The fascist grouping cooked up a scheme to use religious movements to take over national governments with the help of the World Bank and the UNEP (United Nations Environment Program). In the final proceedings of the event, both of these organizations were assigned to monitor the policies of governments on the subject of environmental protection and population control. Even in 1995, nearly 10 years after the Assisi Conference, Prince Phillip's ARC was working closely with Wolfensohn of the World Bank in destroying national governments. In an interview with EIR's Scott Thompson, Martin Palmer, Prince Phillip's religious advisor, discusses the relationship between Phillip and Wolfensohn: "The World Bank was present. And, this created an interest in the World Bank as to whether the religions might not be similar allies in development work. And, very much with Prince Phillip's encouragement—he hosted an initial reception at Buckingham Palace for this initiative to be discussed. Last October, he hosted a luncheon to raise funds for the project: the joint work between religions and the World Bank." Thus, Philip pushed his ideology of population control and zero development through networks all over the world and used it to expand the power of the World Bank and other supra-national institutions. Out of these 1980s interfaith meetings was born the seed crystal for one of Britain's slickest instruments in expanding the influence of the UN and the World Bank: Transparency International.

1989 was a crucial turning point for world civilization. The collapse of the Soviet economic system begged the question of whether we would unite as nations and rebuild the disintegrated economy or whether we would continue to loot. For Prince Philip and his cronies, the world

1. This was the same Jewish Rothschild banking family funding the fascism of Mussolini and Hitler in the 1930s.

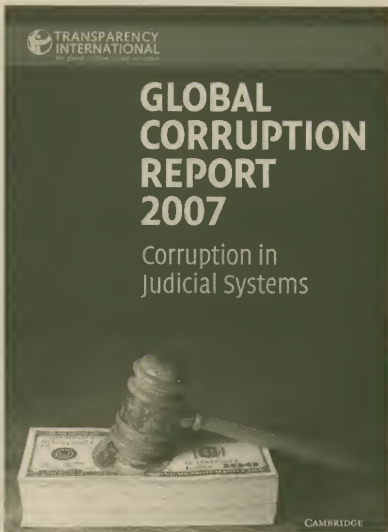

2. It was Prince Phillip's avid desire to contribute to the genocide of the planets population. In August of 1988, he stated "in the event that I am reincarnated, I would like to return as a deadly virus, in order to contribute something to solve overpopulation."

situation was ripe for his hostile takeover of nations. Most vulnerable to their attack was the recently collapsed developing nations of the former Soviet Eastern bloc. In order to keep all protectionist policies off the table, the British Empire launched an attack on all developing nations, targeting Eastern Europe and Russia with economic shock therapy, carrying out a series of assassinations in Germany, and pushing an anti-corruption, anti-public projects, green inspired agenda, on the rest of the world.

Exemplary in their attacks on developing nations was the 1989 attack on the continent of Africa. That year, with the world in tumult, the opportunity was created for the threat of British colonial policy in Africa to be broken. The United States and Italy, in particular, began drawing up outlines for the development of Africa's infrastructure and agriculture. At the time, the future chairman of Transparency International, Peter Eigen was the World Bank representative in Kenya, and he launched a shadow organization within the World Bank aimed at squashing all economic development schemes in Africa. The bank, upon Eigen's orders, issued a report titled, "Sub Saharan Africa, from Crisis to Sustainable Growth,"³ which shifted the role of the World Bank from that of a mere lending institution to an organization which would ensure the "good governance" of Africa. The report aimed at establishing a "global coalition for Africa", led by the World Bank, which would work to tackle the problems of "environmental protection, capacity building, population policy, food security, and regional integration and cooperation...and dealing with corruption...through the expansion of markets."⁴ Ultimately, the report set into motion a policy for Africa completely contrary to the plans laid out by Italy and the US. It called for a restriction of its industrial development, looting of its rich resource base, and the starvation of the majority of the population. In short, Africa was swiftly brought back into Britain's colonial bosom.

3. Sub-Saharan Africa: From Crisis to Sustainable Growth: International Bank for Reconstruction and Development, Washington DC: The World Bank, 1989.

4. Ibid.

Transparency International releases a Corruption Report every year targeting those nations which are next on the list for a British takeover.

The most important effect of the report, however, was to lay the foundations for an enforced policy of interference into developing nations on the pretence of battling "corruption." At a meeting in Swaziland in 1990, Eigen discussed his plan for taking over the African continent: "As a World Bank representative in Kenya, I agreed to talk about corruption as a powerful enemy of good governance...I then proposed a plan of action that had evolved from lengthy discussions with many colleagues and friends in Nairobi. Clearly, most people are against corruption; why not then channel this opposition into the construction of an effective coalition promoting transparency?" These were the first ominous utterings of what would later be Peter Eigen's Transparency International; an or-

WWF head Prince Philip took Al Gore under his bosom in his quest to destroy nation states and rid the population of 5 billion "extra" people.

ganization set up to ostensibly deal with "corruption" but which instead became one of Britain's greatest weapons against the sovereign nation state.

Transparency International

TI was officially created as an independent organization in 1993. However, as stated before, its inception actually came out of the World Bank report on Africa as well as Eigen and Phillip's meetings about the "sustainable development of Africa." From that moment onward, TI exploited the term "corruption" in every possible way and used it to launch war against any government that was troublesome for British economic policy. Once a government was labeled "corrupt," a campaign was immediately launched to overthrow and suppress it. In an *Il Giornale* article in 1997, journalist Gianluigi Nuzzi exposed the hand of Prince Phillip and his interfaith meetings as the "moral-theological foundations" of Transparency International.⁵ In this capacity, the World Bank and the IMF began a systemic destruction of anything and anyone opposed to their practices of looting. TI was supported and backed by some of the most

corrupt, anti-nation state officials on the planet. With World Bank executive Eigen as its chairman, former World Bank head Paul Wolfensohn, sitting on its Advisory Council, and with financial backing from Britain's Crown Agents⁶ and George Soros' Open Society Institute,⁷ TI was in the middle of some of the nastiest anti-nation operations throughout the 90s.

Transparency established an "Interfaith Code of Ethics," promoted by Prince Philip's earlier conferences, which standardized a definition of "corruption" consistent with Philip's religious goals. It repeatedly emphasized the establishment of an "anti-corruption authority," completely independent of any governments or national leaders. Operating as a "humanitarian" organization, TI issues a yearly corruption report which pinpoints the countries targeted for TI and World Bank intervention. According to Eigen, TI's definition of corruption is as follows: "Corruption allows leaders to cling to power while resisting government reforms.... Corruption hinders the creation of free markets.... is conducive to fundamental mistakes in project selection and project design—often with catastrophic consequences for both society and environment.... All too often a corrupt environment channels resources to nonproductive areas such as the police and the armed forces and other organs of social control.... The ultimate goal is practical change in laws, institutions, and policies."

For those not schooled in the euphemistic sophisms of Eigen and his organization, his definition of corruption really means: *Any government attempting to protect their economy by not allowing speculators and international financiers to loot the country; any government funding the building of public infrastructure and economic development projects; any government trying to limit the amount of chaos caused in their country or trying to protect their borders through law enforcement and public armies; and any government that is too large, too outspoken, and too much in disagreement with destroying their society is corrupt. They need to be eliminated and taken over completely.* That was precisely the job of TI.

The agent chosen to push this "foreign policy" was Al Gore.

Enter...Al Gore

In the midst of all these events, that conniving swamp creature Al Gore, had been entertaining a feverish correspondence with Prince Philip for years on conservation, population control, and their mutual hatred of national sovereignty. Finally, in 1990 the two green soul mates met at a conference in the Washington National Cathedral. According to Martin Palmer, Prince Philip's genocidal spiritual advisor, Gore and Philip had "quite a meeting of the minds." For Prince Philip, Gore was the perfect man to promote the international credibility of Transparency International and the World Bank in their schemes to take over nations.

8. *Global Forum on Fighting Corruption: Safeguarding Integrity Among Justice and Security Officials*, Final Report, Washington D.C., February 24-26, 1999.

9. Eigen lays out the way TI operates the "perfect destabilization" of a nation such as Nigeria. First, through the deployment of NGO's, such as George Soros' Open Society, chaos is stirred up, the population is destabilized, and the government is weakened through civil war and scandal. Then, the IMF moves in, the government is brutally cut from the necessary aid and funding it needs to survive and

As Vice President, Gore launched a campaign within the United States to "reinvent government." His plan, fully endorsing the policy of Prince Philip's TI, promoted the takedown of excessive government in the United States and pushed to stop corruption and end slow bureaucracies. Gore's efforts led to the passage of a bill, entitled the International Crime Control Strategy, whose objective called for the United States government to "strengthen the rule of law as the foundation for democratic and free markets in order to reduce societies' vulnerability to criminal exploitation." Basically meaning, lets reduce the government, open up governments to financial looting, and enforce it with an international police force against "corruption" (a/k/a too much government). This was later used as the pivot of Gore's 1999 Conference on fighting corruption; the same conference which would launch Transparency International as a credible and necessary international force.

At this conference, entitled a "Global Forum for Fighting Corruption," Gore laid out the importance for all nations to work to fight governments blocking free markets and his system of phony capitalism. In advocacy of TI's harsh standards for taking over nations, Gore stated that "the fight against corruption is not separate from the process of government reform" and that he personally would be working with the World Bank and other NGOs to reinvent governments.⁸ Directly after him, Jeremy Pope of Transparency International addressed the conference and went through how six years ago it was taboo to take over national governments and TI was considered "mad, bad, and dangerous to know." However, since Gore's role in promoting TI, it now had over "70 branches all over the world... [and was] a major factor in government policy." Pope ended his speech by pleading with the guests to give all possible help to Nigeria as its newly elected president took office. It had been TI's 1997 Corruption Report, giving Nigeria the #1 spot as the most corrupt nation which led the overthrow of its government.⁹

In the midst of a tense world situation, Al Gore's Conference succeeded in its intended goal of mak-

ing plunged into economic turmoil and misery. Finally, TI gets involved, functioning as a "catalyst." Transparency representatives hold discussions with the government and with the leaders of different political factions, playing both sides and stirring up more chaos. TI exits the nation with primary control of a large political faction within the country and is in a position to dictate new laws and pressure the UN, World Bank, or other nations to move in and enforce "good governance" through military action. Thus, within a number of months, an entire nation is destroyed and taken over.

Jonathan McIntosh, 2004

Protests such as this one in Indonesia, are common in developing countries which have been economically destroyed by the looting practices of the World Bank.

ing "fighting corruption" the new fad. TI and the World Bank were thus given the go ahead and the backing of Gore's United States.¹⁰

Foot-in-the-Mouth Disease

Meanwhile, as Gore was pushing Transparency International and reinventing government in the US, his foreign deployments were even more sinister.

After Malaysia's independence from the British Empire, it began to rebuild its economy and launched a series of infrastructure and development projects which increased the standard of living of the population and established it as a force in the world. In 1995, the British deployed their lackey George Soros to pressure Malaysia to "get with the times," throw open their markets, and eliminate the power of their government. Soros

and his gang invaded Malaysia and the rest of Southeast Asia with hot money schemes, rabid speculation, and free market looting. In less than 5 years, the economy of Southeast Asia collapsed, its currency was demolished, and its living standard was pushed back 15-20 years. George Soros used his Quantum Fund hedge fund to buy up the bulk of the market and take short positions on the Thai Baht, the Spanish Peso, the Indian Rupee and the Malaysian Ringgit. Within a few months, with all of the currencies completely wiped out, the crisis threatened to set off a global financial meltdown. Malaysia's Prime Minister, Mahathir Bin Mohammed, agghast at the vicious attack on his nation, launched a rebuttal against George Soros and his pack of financier hounds by circulating EIR's special report, *The True Story of Soros, the Golem; A profile of mega speculator George Soros*, and by pushing Lyndon

LaRouche's policies for a new Bretton Woods. The Anglo Dutch oligarchy, enraged at Mahathir's blatant disregard for the imperial policy of the empire, sent in dupe Al Gore to eliminate the protectionist current within Malaysia.

In 1998, following this economic crisis, Malaysia hosted the annual AIPAC (Asia Pacific Economic Conference) conference in order to discuss cooperation between the Asian nations and Europe for economic development. Originally, President Clinton was intending to discuss a new economic order, based on Lyndon H. LaRouche's call for a New Bretton Woods, with the nations of Southeast Asia. Al Gore and his cronies Albright and Holbrooke, sneaky as usual, took advantage of the crisis in the Balkans to distract Clinton. Leaving him to deal with the situation, they took his place at the AIPAC summit. Throwing away Clinton's speech to the Asian nations, Gore proceeded to give a blistering speech in which he insulted Mahathir, defended Soros, and encouraged anti-government rioters who were protesting outside the venue against the Malaysian government. Gore stated that Malaysia must discard its

10. Al Gore's promotion of TI was mainly through his 1993 "reinventing government" schemes in the United States.

fantasies of protectionism because "in the end ... protectionism will only protect us from prosperity itself." Instead his solution was to rely on the "magic of the marketplace" for a short term recovery of the Southeast Asian economies. Then, further insulting the Prime Minister, Gore threw his support behind the "reformasi" movement led by Mahathir's political enemy, Anwar Ibrahim protesting outside. He stated, "People will accept sacrifice in a democracy, not only because they have had a role in choosing it, but because they rightly believe they are likely to benefit from it.... The message this year from Indonesia is unmistakable: People are willing to take responsibility for their future--if they have the power to determine that future.... Democracy confers a stamp of legitimacy that reforms must have in order to be effective. And so, among nations suffering economic crises, we continue to hear calls for democracy and reform in many languages--'people's power,' 'doi moi,' 'reformasi.' We hear them today--right here, right now--among the brave people of Malaysia." After concluding this speech, Gore promptly turned on his heel and, with his dinner left untouched, exited the venue, leaving government officials and heads of state incensed.

Al Gore's attempt to play president in Malaysia clearly failed.

"Disgusting" and "repulsive" were the main reactions to Gore's attempt at international "diplomacy." Mahathir, fuming at Gore's blatant disrespect and rudeness at the conference stated, "We should fry him. Gore does not love Malaysia nor its people. Al Gore and his government only want to manipulate and control our country."

Lyndon LaRouche responded to this performance by warning people about Al Gore's serious malady: "Those familiar with Gore would caution Asians not to overreact to such vintage Gore diplomacy: 'What better should you expect from

a Cigar-Store Indian?' Others might argue that Gore is a notorious sufferer from a relevant childhood infection, foot-in-the-mouth disease."

The New Diplomacy

Currently, over 2 billion people in this world are on the brink of starvation. 800,000 of them are in critical condition. Many people in the United States, let alone the rest of the world, cannot afford housing for themselves and their families. As a matter of fact, foreclosure rates have recently reached Depression levels. Bridges have collapsed; train systems are teetering on their last legs; airlines continue to shut their doors; and necessary infrastructure, such as flood control, are becoming nonexistent. The population is in a panic. In order to deal with this we need an FDR-style economic recovery policy and a New Bretton Woods system.¹¹

Al Gore preaches free trade, globalization, and the takedown of sovereign nation states. Any sane citizen of the United States must recognize his babble for what it truly is: sophistry and lies. Al Gore proposes a policy to destroy the system of nation states in the world. His utopia would reduce the world's population by 5 billion people, turn entire cultures into rubble, and catapult society's development back hundreds of years. Are the citizens of the United States prepared to deal with the repercussions of Al Gore's Diplomacy?

11. In a recent paper, Lyndon LaRouche laid out the solution necessary in order for civilization to survive:

"If we wish to survive the presently onrushing, global economic-breakdown crisis, we, of the United States, must insist on returning to Roosevelt's intentions now. First, we must re-establish the principle of national sovereignty. Then, each presently deprived nation, must be assisted to fulfill its desire to develop into the desired form of the sovereign nation-state. Not all objectives will be reached immediately, even though they are proper choices; therefore, our policy must be establishing an intended, working system of developing sovereign nation-state republics, a goal which must be reached, or else nothing much will have been reached, after all.... The signs are clear. These terrible times now immediately before us, warn us to unite, as respectively sovereigns, to defend the proper common aims of mankind.

Gore's No-Energy Proposal:

You Can't Get to Heaven on Solar-Skates

By Larry Hecht, Editor in Chief, 21st Century Science and Technology

Al Gore's latest energy proposal will reduce world population by billions--and he knows it. The low energy flux densities and other inherent limitations of wind and solar power, as compared to nuclear reactions, mean that Gore's proposal to replace fossil fuels with these "green alternatives" will doom billions to disease, starvation, and early death, through the denial of access to food, water, electricity, and other life-giving technologies.

Abundant electrical energy and industrial process heat are an absolute requirement for the continuation of human life on this planet. The incompetence of most discussions of "alternative energy" as carried out today, is that they begin by ignoring the need of more than 80 percent of the Earth's human population to get access to sufficient electrical and other energy.

In the United States, western Europe and Japan, there are approximately 2 to 3 kilowatts of electrical generating capacity available per capita. In China, the figure is less than 0.25 kilowatts per capita, and in most of Africa it is 10 times lower. Without the availability of electrical power as the basis for modern civilized life, infant mortality, disease, malnutrition, and shortened life spans are the result. The only way humanly possible to remedy this situation, is to begin now a crash program to build 6,000 new nuclear plants by the year 2050. Nuclear energy is a proven technology with several million times the energy flux density of solar or wind power. In addition to life-giving electricity, the concentrated power-producing capability of nuclear plants can provide high temperature industrial process heat, for such essential economic activity as ore smelting and refining. It also permits the efficient desalination of sea water to provide potable water to the many parts of the world that are now suffering fresh water shortages, and allows for the efficient production of hydrogen-based fuels to replace petroleum.

Modern nuclear plants are inherently safe. The so-called nuclear waste problem is a fraud; efficient systems for reprocessing nuclear waste were

developed and used in the United States since the 1950s. Reprocessing systems originally developed in the U.S.A. are still used in other nations including Japan and France. Nuclear fuel reprocessing was shut down under the Ford, Carter, and Reagan administrations, as part of the general dismantlement of U.S. industry and science which took force in the 1970s.

How Nuclear Power Works

Nuclear is, in fact, the only truly renewable fuel. The nuclear reaction occurs when the unstable nucleus of uranium-235, a naturally occurring isotope of uranium, splits or fissions into lighter nuclei, releasing enormous amounts of energy that was previously bound into the atomic nucleus. Uranium 235 makes up about 0.7 percent of the uranium found in the earth, the rest being uranium-238. To produce nuclear fuel, the proportion of uranium-235 is slightly concentrated in a process known as enrichment, so that it may make up from 3 to 5 percent of the total uranium in the fuel. Each time a uranium nucleus fissions, it also releases several neutrons, an electrically neutral nuclear particle. Only one of the neutrons is required to trigger another fission reaction, and thus keep the power production process going.

The other neutrons released in the fission can be put to work to create new nuclear fuel, making the process renewable, and almost unlimited. This occurs by several means. Some of the unburnt uranium-238 is transmuted into plutonium, a fissionable element heavier than uranium. The combination of unburnt uranium and plutonium, known as a mixed oxide fuel, can then be utilized in another power-generating reactor. This is true renewability. It is as if you could take the ashes from a spent fire, and burn them a second time, and then a third, and so on.

Another way to use the extra neutrons from the nuclear reactor is in the thorium cycle. Thorium is

Korea's Yongwang nuclear complex with six reactors.

Courtesy of Korea Hydro & Nuclear Power Co., Ltd.

a naturally occurring element several times more abundant than uranium. It is found in the beach sands of Brazil and southern India, and many other locations around the Earth, including, Australia, Canada, Greenland, South Africa, and the United States. When a blanket of thorium is placed around the fuel rods in a nuclear reactor, the thorium is transmuted into uranium-233, another isotope of uranium which can be made to fission, even more readily than the naturally occurring uranium-235. Because of the great abundance of thorium in their country, and the tremendous need for more electric power and fresh water, Indian atomic scientists have made great strides in developing nuclear reactors using the thorium cycle.

When the uranium nucleus breaks apart in the fission process, a great variety of lighter elements are produced. Some of these are radioactive isotopes which have known uses in medicine, research, and such commercial applications as food irradiation. Others have no known uses now, but surely will find a role in a future economy as science progresses. With modern recycling techniques, unfortunately not used anymore in the United States, only about 4 percent of the output of a nuclear reactor is "waste," although this waste will one day be considered very valuable material.

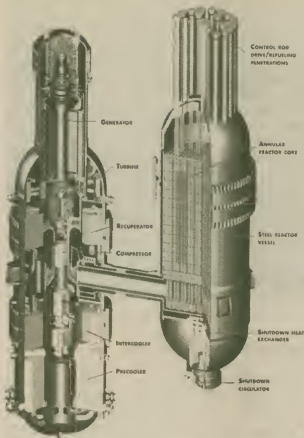

The Promise of Nuclear

In the near future, perhaps first in portions of China along the great Eurasian Land Bridge, new cities and towns will be built around the concept of the nuclear agro-industrial production complex, or Nuplex. Surrounding a modern nuclear reactor installation will be heavy industries, ore-processing facilities, factories for production of fertilizer, plants for the production of hydrogen-based fuel

Carbon_cycle-cute_diagram- german.svg

Human beings are an integral part of a healthy ecosystem.

<http://gt-mhr.ga.com/>

The GT-MHR is a high-temperature, gas-cooled, fourth-generation reactor used for industrial processes such as desalination and the creation of hydrogen-based fuels, as well as electricity generation.

by high-temperature electrolysis or chemical catalysis, and, where necessary, water desalination facilities.

In areas of the world with less developed transport and infrastructure systems, and lower population densities, we might begin with the location of smaller modular reactors in the 100 to 200 megawatt output range. These can supply the electrical power to immediately improve the living standards of human populations, and to power great infrastructural projects, such as the long-awaited trans-Africa railroad from Dakar to Djibouti. The Pebble Bed Modular Reactor (PBMR) now produced by South African company, and the American General Atomics Gas Turbine Modular Helium Reactor (GT-MHR) are candidates for such a role. Both these type of reactors, known as Fourth Generation, utilize fuel particles that are

completely self-contained. The uranium fuel is enclosed in small spheres surrounded by layers of silicon carbide and pyrolytic carbon, thus eliminating the need for large containment buildings. The design permits the use of inert helium gas, rather than water, to capture the heat of the reaction and transport it to generating turbines.

In even more remote regions, new types of completely self-contained reactors requiring virtually no human intervention can be utilized. One such candidate is a reactor designed at the Lawrence Livermore National Laboratory by a team under the direction of the late Dr. Edward Teller, which buries itself in the ground and self-contains its own by-product as it produces abundant electrical power.

With the wealth and knowledge that a nuclear-based economy will give us, we can at last achieve the aim of lifting all mankind out of disease, poverty, and ignorance. But we shall also reach higher, beyond the confines of this mud ball, Earth. As we proceed in this project, we shall establish scientific stations on the Moon from which we can carry out planetary exploration, and build an industrial base for mining of the fuel of the future, helium-3, available in plentiful supply on the Moon's surface. We will establish observatories beyond Earth's orbit, from which observations in every part of the electromagnetic spectrum will provide us with new knowledge that will yield unimaginable possibilities for our posterity.

Why Solar Doesn't Work¹

The genocidal Al Gore's widely advertised claims to the contrary, there are no improvements in solar conversion energy technology significant enough to make his solar power proposal into anything but a greenie wet dream--and, for basic scientific reasons, there never will be. If implemented, the great achievement of solar power would be the needless death of

1. To replace all of the 1,090 Gigawatts of electrical generating capacity of the United States with solar plants would require a surface area of 37,000 square miles--approximately the land surface area of Virginia. To deliver a modern level of electric power to the world's population, using solar plants, would take 548,000 square miles, five times the land area of the United Kingdom and the Netherlands combined--thus, rendering even annexation by the United States a fruitless effort. Germany, which abandoned nuclear power development in favor of wind and solar, still relies on nuclear for 26% of its electric power, coal for 62%, and wood burning, geothermal, wind, and solar for only 7%.

Shown: Video grab from "An Inconvenient Truth"

The amount of noxious gas expelled from Al Gore's rear end during his campaign for global warming was enough to cover the entirety of the world's land mass in CO₂.

hundreds of millions, perhaps billions, around the globe.

The basic problem with using solar power as a source of electrical power is the low density of energy flux from the Sun. Measured in watts received per square meter of land area at the Earth's surface, the yearly averaged solar flux varies across the United States from about 160 in New England to 240 in Albuquerque, NM, for a nationwide average of 200 watts per square meter. If all that solar energy could be converted directly into electricity, you could light two 100-watt bulbs for every square meter (about 11 sq. feet) of land area--during the day, that is.

Of course, all the Sun's heat cannot be converted into electricity. Take the latest solar plant to be brought on line, Nevada Solar One, a solar concentrator plant near Boulder City, NV which incorporates the latest German-built parabolic mirrors to focus the Sun's heat on specially designed vacuum-insulated steel and glass receivers produced by Germany's Schott firm. Although rated at 64 megawatts peak generating capacity (that is at full Sun), the actual averaged generating capacity of the plant over the 24-hour day is somewhat under 15 megawatts. This is produced on a land surface area of 1.3 million square meters (321 acres), bringing the actual electrical generating capacity of the plant to 11.4 watts per square meter. Thus it takes about 9 square meters, or 96 square feet of plant area to generate

enough electricity to light a 100-watt bulb--during the daytime.

To replace all of the 1,090 Gigawatts of electrical generating capacity of the United States with solar plants would require a surface area of 37,000 square miles--approximately the land surface area of Virginia. To deliver a modern level of electric power to the world's population, using solar plants, would take 548,000 square miles, five times the land area of the United Kingdom and the Netherlands combined--thus, rendering even annexation by the United States a fruitless effort. Germany, which abandoned nuclear power development in favor of wind and solar, still relies on nuclear for 26% of its electric power, coal for 62%, and wood burning, geothermal, wind, and solar for only 7%.

Why Wind Won't Work

The fundamental problem with wind energy is the same as that of solar. It is intermittent and the energy flux is too low. In a study of the problem in Texas, where T. Boone Pickens is receiving huge government boondoggles for his wind energy scheme, 21st Century Science & Technology writer Gregory Murphy compared the energy flux density of the Comanche Peak nuclear plant, south of Dallas, to a wind installation. The Comanche Peak nuclear plant, has 2 units with a combined generating capacity of 2,500 megawatts (MW). Comanche Peak is sitting on 4,000 acres, which includes a man-made cooling lake that also serves as a recreation spot. How many 1.5-MW General Electric wind turbines (the kind Pickens has chosen for his wind farms) would it take to produce the same amount of energy that the Comanche Peak reactors produce? As Murphy elaborates:

"First, we divide the amount of energy that the reactor produces, 2,500 megawatts, by the nameplate rating of the wind turbine, which is 1.5 MW. That gives us the number of wind turbines that would be needed to produce that same amount of energy as the nuclear reactor: 1,667 wind turbines.

"But not so fast ... Since we are looking at the energy density of wind energy, we need to know how that capacity factor is figured. The capacity factor represents the amount of energy actually produced by the wind turbine, divided by the amount of energy at which the wind turbine is rated. The average wind turbine has a capacity factor of 25%, which means that it will take four wind turbines to equal the nameplate-rated output of one wind turbine. Given that

This shows the currently operating nuclear power plants. In order to ensure the standard of living and quality of life of at least 50 billion people by the year 2050, we will need a crash program for the development of a minimum of 6000 nuclear power plants.

fact, we must now multiply our 1,667 wind turbines by 4, which gives us 6,668 wind turbines, rated at 1.5 MW each.

"Now, let us look at the amount of land area that would be needed for these 6,668 wind turbines. General Electric, the producer of the 1.5-MW wind turbines used in this example, recommends spacing the wind turbines at three times the diameter of the wind turbine rotors, so that the wind trailing off the rotor doesn't affect neighboring wind turbines. GE also recommends that the spacing between rows of wind turbines be five times the diameter of the wind turbine rotor, so that the next row of wind turbines can make use of the available wind.

"The General Electric 1.5-MW wind turbine has a rotor diameter of 77 meters (262.6 feet). To get an idea of the size of the wind turbine, the area that the rotor sweeps out is big enough to place a 747 jumbo jet inside. So keep that in mind as we continue.

"To figure the spacing of the wind turbines, let us multiply the rotor diameter of 77 meters by 3, which gives us 231 meters as the spacing between the wind turbines. Now let's figure the distance between the rows of wind turbines by multiplying the rotor diameter of 77 meters by 5, which gives us 385 meters between the rows.

"If we multiply 231 by 385, it will give us the total area required to site one of our 1.5-MW wind turbines. This comes out to 88,935 square meters or 22 acres of land for one 1.5-MW wind turbine. If we now

multiply the 22 acres by the 6,668 wind turbines, we get 146,696 acres, which is 229.21 square miles (about three times the size of the metropolitan Washington, D.C. area). So it appears that it will take 146,696 acres of land covered with wind turbines, to have a part-time generating capability equivalent to that achieved on 4,000 acres of land for the nuclear power plant (which includes a lake used to provide water to the cooling towers)."

Murphy's study also points out that there is a common fraud in the statement of the availability factor for wind turbines, which is the percentage of time that the wind turbine or any other power source is available. Writes Murphy, "Wind energy advocates purposely confuse the availability factor and the capacity factor in their promotional materials, to try to demonstrate that a certain number of wind turbines can produce the same energy as a nuclear power plant. In truth, although the availability factor of the wind turbine is 100% because it is available to produce power at any time, wind turbines actually produce power less than 25% of the time, and that is only when the wind blows. Compare this to the nuclear power plant, in which the availability factor and the capacity factor are the same-about 95%. The only time the nuclear reactor is not producing power is during maintenance periods."

Solar and wind power share another problem. As they are intermittent sources, they require backup power systems and a complex relationship with the power grid, whereby the power flow can be switched on and off at various times. As they are placed, by necessity, in remote locations, wind generators incur an added expense of many miles of additional transmission lines. In the case of the Texas wind boondoggle, the cost of hundreds of miles of high-voltage transmission lines for the unneeded wind installations is going to be incurred by the consumers, who will have already subsidized the wind farms through huge tax givebacks to the wind energy speculators.

Neither wind nor solar are serious solutions to the world's energy needs. They are, rather, prescriptions for the destruction of progress and the genocidal reduction of the human popula-

tion. What is really under attack in the proposal by Gore, the front man for the Anglo-Dutch oligarchy's wish to return to a new Dark Age, is science itself. Having largely destroyed the nuclear capability of the United States, the intent is to channel what remains of the next generation's scientific impulse into the pursuit of better solar cells, climate frauds, and cataloging extinct species of which the fastest accelerating is mankind.

We can secure a better future. For the first time in history, we have the means to lift all mankind out of the misery of backbreaking toil, disease, and ignorance. But first, we must overcome the irrational fear of nuclear power, and indeed, of science in general, which the controllers of Al Gore have attempted to impose upon us, from motives which are hideously evil.

Brent Bedford/LaRouchePAC

Doom Has Struck! Three Steps to Survival

by Lyndon H. LaRouche, Jr.

March 17, 2008

As most clearly stated by the voice of Germany's financial market, the Frankfurter Allgemeine Zeitung (FAZ), the Bear Stearns bankruptcy marks the point at which the present world monetary-financial system has entered the terminal, hyperinflationary-collapse phase of that breakdown-crisis which began at the close of the previous July. Now, there are three essential measures which must be taken more or less immediately, before the situation in the U.S.A. and western Europe becomes hopeless. These are the three types of measures which I have presented earlier; those who continue to resist the adoption of these measures now fall promptly into the category of incompetence known as mental cases.

1. My Homeowners and Bank Protection Act of 2007 must be adopted and set into motion immediately. If not, the situation of the U.S. becomes quickly hopeless.

2. A two-tier credit system, in which a.) U.S. government credit for physical-economic recovery programs is provided at between 1-2%, and b.) other utterances of credit-injections float more or less freely.

3. The U.S.A. government must now immediately approach the governments of Russia, China, India, and others for the prompt establishment of an international, emergency fixed-exchange-rate system, ending the presently hopelessly bankrupt floating exchange-rate system.

Under that latter, proposed agreement, long-term treaty-agreements shall be focussed on intergovernmental development of capital-intensive types of essential basic economic infrastructure, as in: a.) new construction in power generation (with emphasis on nuclear); b.) fresh-water sources creation (relying largely on high-temperature nuclear reactors); c.) increasing reliance on synthetic fuels, such as high-temperature, nuclear-generated power, in place of petrochemical materials used as fuels; d.) high-density systems of globally integrated rail, maglev network developments must replace presently excessive reliance on highway transport; e.) de-emphasis on giant conglomerates and monopolistic practices, in favor of smaller, more closely held productive enterprises dispersed as essential elements of the economy of moderate-sized regions of combined private entrepreneurial industry and agriculture; f.) heavy, and increasing emphasis on development of high-energy-flux-density modes in technological progress of manufactures and other applications.

Comment:

The present Trans-Atlantic monetary-financial system is now hopelessly bankrupt; the wild-eyed measures associated with actions by the U.S. Treasury and Federal Reserve System represent an eruption of lunatic recklessness beyond belief! Those relevant public or private officials who disagree with that assessment, or who continue to oppose the HBPA as I have defined it, now clearly require professional psychiatric care.

Since efficient, modern production and supporting infrastructure, require emphasis on capital intensive forms of physical capital investments in the order of between a quarter- and a half-century estimated useful life over the course of physical and/or technological attrition, long-term treaty-agreements among trading-partner nations in those orders of magnitude, at interest rates charged to and among governments in the order of 1-2% per annum, will be the required practice if proper human goals for populations, as in Asia and Africa, are to be reached.

To facilitate this, the pseudo-scientific, neo-Malthusian humbug of so-called global warming, must be brought to a halt; otherwise, a plunge of the planet into a mass-murderous new dark age, one worse than that experienced by mid-Fourteenth-Century Europe, were inevitable for the planet as a whole.

There are no known, sane alternatives existing at this juncture.

The success of President Franklin Roosevelt's reforms of the 1932-1944 interval, is the model of policy-shaping which provides a proven precedent for the policies which must be adopted among sane nations now.

Note:

It should be noted, that the current proposal for privatizing systems of basic economic infrastructure, and the Tower of Babel model which the British Empire has drafted for adoption by a proposed, neo-feudalist form of empire such as the Lisbon Treaty draft, is not only a mimicking of the Biblical Tower of Babel, but, as proposed by New York Mayor Bloomberg et al., is a proposed return to the league of cities monstrosity associated with the Lombard League's plunge of Europe into a medieval New Dark Age, whose effects included an obliteration of an estimated fifty percent of the parishes of Europe, an estimated collapse of the European population by one-third, and the pollution of Europe by screaming, predatory hordes of those maddened creatures typified by the Flagellants of that time.
